A Systolic Array Optimizing Compiler M. S.-L. Lam, 1987 *A Systolic Array Parallelizing Compiler* Ping-Sheng Tseng, 1990-08-31 Widespread use of

parallel processing will become a reality only if the process of porting applications to parallel computers can be largely automated. Usually it is straightforward for a user to determine how an application can be mapped onto a parallel machine; however, the actual development of parallel code if done by hand is typically difficult and time consuming. Parallelizing compilers which can generate parallel code automatically are therefore a key technology for parallel processing. In this book Ping Sheng Tseng describes a parallelizing compiler for systolic arrays called AL. Although parallelizing compilers are quite common for shared memory parallel machines, the AL compiler is one of the first working parallelizing compilers for distributed memory machines, of which systolic arrays are a special case. The AL compiler takes advantage of the fine grain and high bandwidth interprocessor communication capabilities in a systolic architecture to generate efficient parallel code. xii Foreword. While capable of handling an important class of applications, AL is not intended to be a general purpose parallelizing compiler.

Parallel Supercomputing in MIMD Architectures is devoted to supercomputing on a wide variety of Multiple Instruction Multiple Data (MIMD) class parallel machines. This book describes architectural concepts, commercial and research hardware implementations, major programming concepts, algorithmic methods, representative applications, and benefits and drawbacks. Commercial machines described include Connection Machine 5, NCUBE, Butterfly, Meiko, Intel iPSC, iPSC 2, and iWarp, DSP3, Multimax, Sequent, and Teradata. Research machines covered include the J Machine, PAX, Concert, and ASP. Operating systems, languages, translating sequential programs to parallel, and semiautomatic parallelizing are aspects of MIMD software addressed in *Parallel Supercomputing in MIMD Architectures*. MIMD issues such as scalability, partitioning, processor utilization, and heterogeneous networks are discussed as well. This book is packed with important information and richly illustrated with diagrams and tables. *Parallel Supercomputing in MIMD Architectures* is an essential reference for computer professionals, program managers, applications system designers, scientists, engineers, and students in the computer sciences.
