Text Retrieval and Document Databases John H. Ashford, Peter Willett, 1988 Text Retrieval and Document Databases, 1989 Multimedia Database in Perspective Peter M.G. Apers, Henk M. Blanken, Maurice A.W. Houtsma, 2012-12-06 During the last decade multimedia has emerged as a major research and development area. Pushed by advanced technology like huge capacity storage devices, fast networks and powerful work stations, new applications have arisen. Many definitions of multimedia systems exist, one of them being computer systems that support interactive use of at least one of the following information sources: graphics, image, voice, sound, and video. These systems have caused a boom in the world of entertainment but also in other business areas. Great opportunities for novel products and services are available. The size of multimedia data is often huge and the storage of huge amounts of data is a task normally allocated to database management systems. Although some modern database management systems offer facilities to support development of multimedia applications, many problems related to multimedia support are still not well understood. This book reports on research efforts to solve some of these problems. An introductory knowledge of databases and also of operating systems and network technology is assumed. The book is very suitable as material for courses at senior or graduate level but also for upgrading the skills of computer scientists working on database management systems, multimedia systems or applications. The book consists of four parts. Part I is called Requirements for a Multimedia Database and comprises chapters one to three. Chapter one presents an outline of the book. *Research And Practical Issues In Databases - Proceedings Of The 3rd Australian Database Conference* B. Srinivasan, John Zeleznikow, 1992-01-08 This volume of proceedings contains original papers of good technical quality which present recent developments in databases and knowledge based systems and their applications to practical problems. Topics covered include databases and temporal databases, object oriented modelling and object oriented databases, deductive databases, distributed database and information systems, database design issues and intelligent databases. The papers reflect the importance of databases and the work being done on them. Database and Expert Systems Applications Trevor Bench-Capon, Giovanni Soda, Min A. Tjoa, 1999-08-20 The Database and Expert Systems Applications (DEXA) conferences bring together researchers and practitioners from all over the world to exchange ideas, experiences and opinions in a friendly and stimulating environment. The papers are at once a record of what has been achieved and the first steps towards shaping the future of information systems. DEXA covers a broad field and all aspects of database knowledge base and related technologies and their applications are represented. Once again there were a good number of submissions: 241 papers were submitted and of these the programme committee selected 103 to be presented. DEXA 99 took place in Florence and was the tenth conference in the series following events in Vienna, Berlin, Valencia, Prague, Athens, London, Zurich, Toulouse and Vienna. The decade has seen many developments in the areas covered by DEXA, developments in which DEXA has played its part. I would like to express thanks to all the institutions which have actively supported and made possible this conference, namely

University of Florence Italy IDG CNR Italy FAW University of Linz Austria Austrian Computer Society DEXA Association In addition we must thank all the people who have contributed their time and effort to make the conference possible Special thanks go to Maria Schweikert Technical University of Vienna M Neubauer and G Wagner FAW University of Linz We must also thank all the members of the programme committee whose careful reviews are important to the quality of the conference

Media Information Base: Proceedings Of The International Symposium Masatoshi Yoshikawa, Yahiko Kambayashi, Shunsuke Uemura, 1998-03-12 With the rapid growth of computer and communication technologies the creation modification and distribution of digital multimedia information have become easier than ever Such multimedia information includes still images video audio texts and artifacts in virtual space The efficient storage of valuable information and rapid access to it is crucial to all modern organizations This proceedings volume consists of papers by researchers and academicians which explore the various aspects of the digital media information base A special emphasis is placed on new database system technologies **Optical Disk Document Storage and Retrieval Systems** Barry Cinnamon, 1988

Databases Naphtali Rische, Doron Tal, Sham Navathe, 1991 *Principles of Multimedia Database Systems* V. S. Subrahmanian, 1998 Until recently databases contained easily indexed numbers and text Today in the age of powerful graphically based computers and the world wide web databases are likely to contain a much greater variety of data forms including images sound video clips and even handwritten documents When multimedia databases are the norm traditional methods of working with databases no longer apply How do you query a video library or an image database containing x rays or sounds in an audio database *Principles of Multimedia Database Systems* explains how to work with these new multimedia data forms It is the first comprehensive treatment of the skills and techniques required to build maintain and query multimedia databases This book presents the mix of techniques necessary for working with multimedia databases including synthetic solutions for the design and deployment of multimedia database systems Because rapid technological developments are constantly changing the landscape of multimedia databases the book teaches basic theoretical principles applicable to any database Covers the major issues of multimedia database design with a strong focus on distributed multimedia databases Discusses important topics including how to organize the vast data types storage and retrieval and creation and delivery of multimedia presentations Organized around the lively scenario of a crime fighting database that evolves as new concepts are introduced Includes numerous exercises and suggestions for programming projects Additional materials on the web include updates on line supplements and links to downloadable software *A Historian's Guide to Computing* Daniel I. Greenstein, 1994 This comprehensive guide is written for historians and other scholars with no prior expertise in the use of computers who need to know what kind of problems computers can solve Dr Greenstein offers advice on how to exploit the computer and avoid potential pitfalls in day to day tasks from bibliographic management to the use of electronic mail and on line library catalogues The three central chapters on research methods examine databases and information management numbers and measurement including statistics and graphical and tabular display and document preparation and textual analysis The final chapter offers an eight point guide to project management which will help the user to harness the

computer in a cost effective efficient and productive manner for projects of any size and complexity Throughout the book methodological and technical discussion is presented in straightforward and precise language augmented by comprehensible diagrams with reference to real historical problems and data sets The book is not tied to specific software or solutions but offers numerous signposts for the reader in search of more detailed or more narrowly defined information
