Understanding Editorial Text: A Computer Model of Argument Comprehension Sergio J. Alvarado, 2012-12-06 by Michael G Dyer Natural language processing NLP is an area of research within Artificial Intelligence AI concerned with the comprehension and generation of natural language text Comprehension involves the dynamic construction of conceptual representations linked by causal relationships and organized indexed for subsequent retrieval Once these conceptual representations have been created comprehension can be tested by means of such tasks as paraphrasing question answering and summarization Higher level cognitive tasks are also modeled within the NLP paradigm and include translation acquisition of word meanings and concepts through reading analysis of goals and plans in multi agent environments e g coalition and counterplanning behavior by narrative characters invention of novel stories recognition of abstract themes such as irony and hypocrisy extraction of the moral or point of a story and justification refutation of beliefs through argumentation The robustness of conceptually based text comprehension systems is directly related to the nature and scope of the knowledge constructs applied during conceptual analysis of the text Until recently conceptually based natural language systems were developed for and applied to the task of narrative comprehension Dyer 1983a Schank and Abelson 1977 Wilensky 1983 These systems worked by recognizing the goals and plans of narrative characters and using this knowledge to build a conceptual representation of the narrative xx UNDERSTANDING EDITORIAL TEXT including actions and intentions which must be inferred to complete the representation A large portion of text appearing in newspapers and magazines however is editorial in nature

**The Creative Process** Scott R. Turner, 2014-02-25 Someday computers will be artists They ll be able to write amusing and original stories invent and play games of unsurpassed complexity and inventiveness tell jokes and suffer writer s block But these things will require computers that can both achieve artistic goals and be creative Both capabilities are far from accomplished This book presents a theory of creativity that addresses some of the many hard problems which must be solved to build a creative computer It also presents an exploration of the kinds of goals and plans needed to write simple short stories These theories have been implemented in a computer program called MINSTREL which tells stories about King Arthur and his knights While far from being the silicon author of the future MINSTREL does illuminate many of the interesting and difficult issues involved in constructing a creative computer The results presented here should be of interest to at least three different groups of people Artificial intelligence researchers should find this work an interesting application of symbolic AI to the problems of story telling and creativity Psychologists interested in creativity and imagination should benefit from the attempt to build a detailed explicit model of the creative process Finally authors and others interested in how people write should find MINSTREL s model of the author level writing process thought provoking

**The 1995 Goddard Conference on Space Applications of Artificial Intelligence and Emerging Information Technologies** Carl F. Hostetter, 1995 *UM99 User Modeling* Judy Kay, 2014-05-04 User modeling researchers look for

ways of enabling interactive software systems to adapt to their users by constructing maintaining and exploiting user models which are representations of properties of individual users User modeling has been found to enhance the effectiveness and or usability of software systems in a wide variety of situations Techniques for user modeling have been developed and evaluated by researchers in a number of fields including artificial intelligence education psychology linguistics human computer interaction and information science The biennial series of International Conferences on User Modeling provides a forum in which academic and industrial researchers from all of these fields can exchange their complementary insights on user modeling issues The published proceedings of these conferences represent a major source of information about developments in this area

**Computer Applications for Handling Legal Evidence, Police Investigation and Case Argumentation** Ephraim Nissan,2012-06-15 This book provides an overview of computer techniques and tools especially from artificial intelligence AI for handling legal evidence police intelligence crime analysis or detection and forensic testing with a sustained discussion of methods for the modelling of reasoning and forming an opinion about the evidence methods for the modelling of argumentation and computational approaches to dealing with legal or any narratives By the 2000s the modelling of reasoning on legal evidence has emerged as a significant area within the well established field of AI Law An overview such as this one has never been attempted before It offers a panoramic view of topics techniques and tools It is more than a survey as topic after topic the reader can get a closer view of approaches and techniques One aim is to introduce practitioners of AI to the modelling legal evidence Another aim is to introduce legal professionals as well as the more technically oriented among law enforcement professionals or researchers in police science to information technology resources from which their own respective field stands to benefit Computer scientists must not blunder into design choices resulting in tools objectionable for legal professionals so it is important to be aware of ongoing controversies A survey is provided of argumentation tools or methods for reasoning about the evidence Another class of tools considered here is intended to assist in organisational aspects of managing of the evidence Moreover tools appropriate for crime detection intelligence and investigation include tools based on link analysis and data mining Concepts and techniques are introduced along with case studies So are areas in the forensic sciences Special chapters are devoted to VIRTOPSY a procedure for legal medicine and FLINTS a tool for the police This is both an introductory book possibly a textbook and a reference for specialists from various quarters

Shape Understanding System Zbigniew Les, Magdalena Les,2008-01-11 This book presents the results of research into one of the most complex and difficult areas research into thinking and understanding The research was carried out at the newly founded Queen Jadwiga Research Institute of Understanding and is focused on the problem of visual understanding and visual thinking The authors believe this is the first book to attempt to investigate the complexity of visual thinking problems in the context of building the thinking machine

*Massively Parallel Artificial Intelligence* Hiroaki Kitano, James A. Hendler, 1994 The increased sophistication and availability of massively parallel supercomputers has had two major impacts on research in artificial intelligence both of which are addressed in this collection of exciting new AI theories and experiments Massively parallel computers have been used to push forward research in traditional AI topics such as vision search and speech More important these machines allow AI to expand in exciting new ways by taking advantage of research in neuroscience and developing new models and paradigms among them associative memory neural networks genetic algorithms artificial life society of mind models and subsumption architectures A number of chapters show that massively parallel computing enables AI researchers to handle significantly larger amounts of data in real time which changes the way that AI systems can be built which in turn makes memory based reasoning and neural network based vision systems become practical Other chapters present the contrasting view that massively parallel computing provides a platform to model and build intelligent systems by simulating the massively parallel processes that occur in nature

*Proceedings of the Conference*, 1991

**Speech-to-Speech Translation** Hiroaki Kitano, 1993-12-31 Speech to Speech Translation a Massively Parallel Memory Based Approach describes one of the world's first successful speech to speech machine translation systems This system accepts speaker independent continuous speech and produces translations as audio output Subsequent versions of this machine translation system have been implemented on several massively parallel computers and these systems have attained translation performance in the milliseconds range The success of this project triggered several massively parallel projects as well as other massively parallel artificial intelligence projects throughout the world Dr Hiroaki Kitano received the distinguished Computers and Thought Award from the International Joint Conferences on Artificial Intelligence in 1993 for his work in this area and that work is reported in this book
