Wildfires kill many animals but are populations of animals affected How do animals survive the passage of fire Why do some  
tree species survive and others die in a fire Do frequent fires cause changes in plant community composition Answering  
questions such as these requires an understanding of the ecological effects of fire Aimed at senior undergraduate students  
researchers foresters and other land managers Dr Whelan s book examines the changes wrought by fires with reference to  
general ecological theory The impacts of fires on individual organisms populations and communities are examined separately  
and emphasis is placed on the importance of fire regime Each chapter includes a listing of outstanding questions that identify  
gaps in current knowledge The book finishes by summarising the major aspects of ecology that are of particular relevance to  
management of fires both protection against wildfires and deliberate use of fire *Pamphlets on Forestry in Minnesota*
