**The Cost of Printing** Frank William Baltes, 1894 *Tagging and Tracking of Marine Animals with Electronic Devices* Jennifer L. Nielsen, Haritz Arrizabalaga, Nuno Fragoso, Alistair Hobday, Molly Lutcavage, John Sibert, 2009-06-10 The 2nd international tagging and tracking symposium was held in San Sebastian Spain in October 2007 seven years after the first symposium was held in Hawaii in 2000 Sibert and Nielsen 2001 In the intervening seven years there have been major advances in both the capability and reliability of electronic tags and analytical approaches for geolocation of tagged animals in marine habitats Advances such as increased data storage capacity sensor development and tag miniaturization have allowed researchers to track a much wider array of marine animals not just large and charismatic species Importantly data returned by these tags are now being used in population analyses and movement simulations that can be directly utilized in stock assessments and other management applications Papers in this volume are divided into three sections the first describing insights into behavior achieved using acoustic archival and novel tags the second reporting on advances in methods of geolocation while the final section includes contributions where tag data have been used in management of marine species Accurate documentation of animal movements and behaviors in critical marine habitats are impossible to obtain with other technologies The management and conservation of marine species are critical in today's changing ocean environment and as electronic tags become more accurate and functional for a diversity of organisms their application continues to grow setting new standards in science and technology Collected Reprints, 1992 *Collected Reprints* Southwest Fisheries Center (U.S.), 1987 **Algorithms and Architectures for Parallel Processing** Sheng Wen, Albert Zomaya, Laurence T. Design and Implementation Julian Quandt, 2023-03-02 Bachelor Thesis from the year 2015 in the subject Electrotechnology grade 1.0 Fachhochschule Bonn Rhein Sieg language English abstract In this thesis an electronic triage tag with wireless interconnectivity is developed implemented and tested The tag submits triage information to the incident command center over a wireless mesh network which is built up by the tags themselves Furthermore the tag is wirelessly interfaceable with vital value sensors to allow live monitoring of patients The developed device works autonomously without any user intervention and is attached to colored

bracelets which are already used for triage There is no need to change the triager s work flow The electronic triage tag is a time efficient extension for existing triage tools to aid rescue forces in accelerated treatment and evacuation of victims Mass Casualty Incidents MCI overwhelm medical resources and require the treatment of a large amount of patients within a very short time Triage is a process used in MCIs to assign scarce medical resources to victims so that as many as possible can survive Currently the triage process is carried out with the help of a Paper Based Patient Tag with a unique ID signaling the victim s treatment priority by its color red green yellow or black Paper based triage strives for a fast and accurate treatment of victims but it has problems with regard to the speed and accuracy of transmitting triage information Live monitoring of victims vital values is not possible because of the paper based process and the lack of medical personnel An electronic approach promises a faster situation overview and thus faster treatment of victims However the introduction of new systems must be done in a sensible way so that the triager s process and workflow is not modified
