Dias,Robert K. Dias,David M. Cupka,Norman A. Chamberlain,1977 A seining survey of the macrofauna of the surf zone at Folly Beach Charleston County S C was conducted from October 1969 to October 1971 Eighty seven collections were made in the surf and associated tidal pool resulting in the capture of 512 specimens of swimming invertebrates representing at least 17 species and 5 095 specimens of bony fishes representing 41 species The data obtained are analyzed on seasonal and yearly bases for total weights and numbers of species and specimens Species are ranked as to importance and prediction equations for monthly average number of specimens per collection in the surf based on environmental variables are developed Length frequency data and other aspects of the biology of selected species are presented Length length and length weight relationships are given for certain species Recommendations for the improvement of the methodology for similar surveys are made **The World Within the Tide Pool** Robert Silverberg,1972 Explains the formation of tide pools and the ecology of the plant and animal life they maintain **NOAA Technical Report NMFS SSRF.** ,1977 **Distribution, Relative Abundance, and Movement of Skipjack Tuna, Katsuwonus Pelamis, in the Pacific Ocean Based on Japanese Tuna Longline Catches, 1964-67** Walter M. Matsumoto,1975 Catch data of the Japanese tuna longline fishery from 1964 to 1967 were analyzed to determine the distribution abundance and movement of skipjack tuna Katsuwonus pelamis in offshore waters of the Pacific Ocean Large skipjack tuna as well as larvae were found to be concentrated mainly in the east central equatorial Pacific Movement of skip jack tuna stocks was determined by following the shifting of high CPUE catch per unit effort cells from one quarter to the next The apparent movement of skipjack tuna stocks in the Pacific appeared to coincide with the circulation of the major ocean currents counterclockwise in the southern hemisphere and clockwise in the northern hemisphere except in the eastern Pacific where the current flow is counterclockwise The movement patterns of high CPUE suggested that skipjack tuna adults or their progeny could move from one area to the next The movement pattern was used also to determine the probable migratory routes followed by skipjack tuna tagged in the eastern Pacific and recovered near the Hawaiian and Christmas islands **Life in a Tide Pool** Allan Fowler,1997-03 From friendly dolphins to giant pandas from icebergs and glaciers to energy from the sun from magnets to solids liquids and gases Rookie Read About Science is a natural addition to the primary grade classroom with books that cover every part of the science curricula Includes animals
