*Uncertainty* H. Günther Natke, Yakov Ben-Haim, 1997-10-22 *Uncertainty: Models and Measures* H. Günther Natke, Yakov Ben-Haim, 1997-10-22 Uncertainty influences the individual as well as society so it is important to enhance our understanding of uncertainty First of all do we all agree on a unique definition of uncertainty in the natural and technological worlds Secondly how can we model uncertainty Is it purely a state of mind the lack of complete knowledge or is it a phenomenon in its own right What heuristic and mathematical models are available What types of questions about uncertainty can be formulated What questions can be realistically answered Do scholars in diverse fields agree on these issues These and other questions are addressed by 20 scholars from mechanical civil electrical material aerospace and ocean engineering from applied mathematics economics industrial engineering and operations research control theory geodesy systems science and philosophy *Principles of Modeling Uncertainties in Spatial Data and Spatial Analyses* Wenzhong Shi, 2009-09-30 When compared to classical sciences such as math with roots in prehistory and physics with roots in antiquity geographical information science GISci is the new kid on the block Its theoretical foundations are therefore still developing and data quality and uncertainty modeling for spatial data and spatial analysis is an important branch of t **Models, Measurement, and Metrology Extending the SI** William P. Fisher, Jr., Leslie Pendrill, 2024-09-23 The book focuses on the extension of quality assured measurement and metrology into psychological and social domains This is not only feasible and achievable but also a pressing concern Significant progress in developing a common conceptual system for measurement across the sciences has been made in recent collaborations between metrologists and psychometricians as reported in the chapters of this book Modeling estimation and interpretation of objectively reproducible unit quantities that support both general comparability and adaptation to unique local circumstances are demonstrated in fields as diverse as artificial intelligence justice and beauty perception *Standard Model Measurements with the ATLAS Detector* Jana Nováková, 2013-08-30 This thesis deals with two main procedures performed with the ATLAS detector at the Large Hadron Collider LHC The noise description in the hadronic calorimeter TileCal represents a very valuable technical job The second part presents a fruitful physics analysis the cross section measurement of the process  $p p \rightarrow Z0$  The Monte Carlo simulations of the TileCal are described in the first part of the thesis including a detailed treatment of the electronic noise and multiple interactions so called pile up An accurate description of both is crucial for the reconstruction of e g jets or hadronic tau jets The second part reports a Standard Model measurement of the  $Z0$  process with the emphasis on the final state with an electron and a hadronically decaying tau lepton The  $Z0$  channel forms the dominant background in the search for Higgs bosons decaying into tau lepton pairs and thus the good understanding achieved here can facilitate more sensitive Higgs detection **Uncertainty Modeling with Applications to Multidimensional Civil Engineering Systems** Ove Ditlevsen, 1981 **Uncertainty in Spatial Data Measures, Models, and Structures** Ashton Myles Shortridge, 2000 A
