Warship Construction:

Warship Builders Thomas Heinrich, 2020-11-15 *Warship Builders* is the first scholarly study of the U S naval shipbuilding industry from the early 1920s to the end of World War II when American shipyards produced the world s largest fleet that helped defeat the Axis powers in all corners of the globe A colossal endeavor that absorbed billions and employed virtual armies of skilled workers naval construction mobilized the nation s leading industrial enterprises in the shipbuilding engineering and steel industries to deliver warships whose technical complexity dwarfed that of any other weapons platform Based on systematic comparisons with British Japanese and German naval construction Thomas Heinrich pinpoints the distinct features of American shipbuilding methods technology development and management practices that enabled U S yards to vastly outproduce their foreign counterparts Throughout the book comparative analyses reveal differences and similarities in American British Japanese and German naval construction Heinrich shows that U S and German shipyards introduced electric arc welding and prefabrication methods to a far greater extent than their British and Japanese counterparts between the wars laying the groundwork for their impressive production records in World War II While the American and Japanese navies relied heavily on government owned navy yards the British and German navies had most of their combatants built in corporately owned yards contradicting the widespread notion that only U S industrial mobilization depended on private enterprise Lastly the U S government s investments into shipbuilding facilities in both private and government owned shipyards dwarfed the sums British Japanese and German counterparts expended This enabled American builders to deliver a vast fleet that played a pivotal role in global naval combat

Wooden Warship Construction Brian Lavery, 2017-04-30 A wonderful book detailing the construction of the Royal Navy s sailing warships from the maritime historian and author of Nelson s Navy Pirates and Privateers The National Maritime Museum in Greenwich houses the largest collection of scale ship models in the world many of which are official contemporary artifacts made by the craftsmen of the navy or the shipbuilders themselves and ranging from the mid seventeenth century to the present day As such they represent a three dimensional archive of unique importance and authority Treated as historical evidence they offer more detail than even the best plans and demonstrate exactly what the ships looked like in a way that even the finest marine painter could not achieve This book takes a selection of the best models to both describe and demonstrate the development of warship construction in all its complexity from the beginning of the 18th century to the end of wooden shipbuilding For this purpose it reproduces a large number of model photos all in full color and including many close up and detail views These are captioned in depth but many are also annotated to focus attention on interesting or unusual features which can be shown far more clearly than described Although pictorial in emphasis the book weaves the pictures into an authoritative text producing an unusual and attractive form of technical history This book includes plentiful visual representations of actual ships in model form and the accompanying graphics make for wonderful reading I cannot express enough how enjoyable this book is to read Spotter Up A high quality book which is recommended to all ship historians and modellers
