The Blakemore Touch:

The Blakemore Touch Diana C. Reep,1988 **The Hand, an Organ of the Mind** Zdravko Radman,2013-05-10

Theoretical and empirical accounts of the interconnectedness between the manual and the mental suggest that the hand can be understood as a cognitive instrument Cartesian inspired dualism enforces a theoretical distinction between the motor and the cognitive and locates the mental exclusively in the head This collection focusing on the hand challenges this dichotomy offering theoretical and empirical perspectives on the interconnectedness and interdependence of the manual and mental The contributors explore the possibility that the hand far from being the merely mechanical executor of preconceived mental plans possesses its own know how enabling enhanced beings to navigate the natural social and cultural world without engaging propositional thought consciousness and deliberation The contributors consider not only broad philosophical questions ranging from the nature of embodiment enaction and the extended mind to the phenomenology of agency but also such specific issues as touching grasping gesturing sociality and simulation They show that the capacities of the hand include perception on its own and in association with other modalities action extended cognition social interaction and communication Taken together their accounts offer a handbook of cutting edge research exploring the ways that the manual shapes and reshapes the mental and creates conditions for embodied agents to act in the world Contributors Matteo Baccarini Andrew J Bremner Massimiliano L Cappuccio Andy Clark Jonathan Cole Dorothy Cowie Natalie Depraz Rosalyn Driscoll Harry Farmer Shaun Gallagher Nicholas P Holmes Daniel D Hutto Angelo Maravita Filip Mattens Richard Menary Jesse J Prinz Zdravko Radman Matthew Ratcliffe Etienne B Roesch Stephen V Shepherd Susan A J Stuart Manos Tsakiris Michael Wheeler *Active Touch Sensing* Robyn Grant,Pavel M. Itskov, Blythe Towal,Tony J. Prescott,2014-07-14 Active touch can be described as the control of the position and movement of tactile sensing systems to facilitate information gain In other words it is finding out about the world by reaching out and exploring sensing by touching as opposed to being touched In this Research Topic with cross posting in both Behavioural Neuroscience and Neurorobotics we welcomed articles from junior researchers on any aspect of active touch We were especially interested in articles on the behavioral physiological and neuronal underpinnings of active touch in a range of species including humans for submission to *Frontiers in Behavioural Neuroscience* We also welcomed articles describing robotic systems with biomimetic or bio inspired tactile sensing systems for publication in *Frontiers in Neurorobotics* *The Oxford Handbook of Synesthesia* Julia Simner,Edward M. Fitzgibbon,Jamie Ward,2014-08-27 Everyday we vicariously experience a range of states that we observe in other people we may feel embarrassed when witnessing another making a social faux pas or we may feel sadness when we see a loved one upset In some cases this process appears to be implicit For instance observing pain in others may activate pain related neural processes but without generating an overt feeling of pain In other cases people report a more literal conscious sharing of affective or somatic states and this has sometimes been described as representing an extreme form of empathy By contrast there appear to be some people who are limited in their ability to vicariously experience the states of others This may be the case in several psychiatric neurodevelopmental and personality disorders where deficits in interpersonal understanding are observed such as schizophrenia autism and psychopathy In recent decades neuroscientists have paid significant attention to the understanding of the social brain and the way in which neural processes govern our understanding of other people In this Research Topic we wish to contribute towards this understanding and ask for the submission of manuscripts focusing broadly on the neural underpinnings of vicarious experience This may include theoretical discussion case studies and empirical investigation using behavioural techniques electrophysiology brain stimulation and neuroimaging in both healthy and clinical populations Of specific interest will be the neural correlates of individual differences in traits such as empathy how we distinguish between ourselves and other people and the sensorimotor resonant mechanisms that may allow us to put ourselves in another s shoes
