INTERMITTENT FASTING FOR WEIGHT LOSS Preview Chapter 4: Why Low-Calorie Diets Don't Work. Have you ever tried lowering your calories to lose weight? Did it work long-term? Could you keep the weight you lost off? If you're reading this book, my guess is that it didn't, and you're not alone. Data from the UK show 1 in 124 obese women get results using this method, meaning the nutrition guidelines some professionals are following have a 99.5% fail rate. A quick goggle of what happened to the contestants on the hit TV series *The Biggest Loser* should be enough to put you off this method. This show is a classic example of why moving more and eating less only works in the short term, if at all. There is a reason there are few reunion shows. So why are low-calorie diets flawed? A study on 14 contestants on the *Biggest Loser* show revealed some alarming results six years after filming had finished. The initial results were impressive, but as the study showed, they were short-lived. Below are results of some of the factors tested:

Factor	Initial Value	Value After 30 Weeks	Value After 6 Years
Weight	328 lb (148 kg)	199 lb (90 kg)	290 lb (131 kg)

As you can see, contestants lost a massive amount of weight during filming but struggled to maintain the weight loss over a long period of time. Download Now To find out why the contestants couldn't keep the weight off and how to prevent it happening to you.
