Understanding Editorial Text: A Computer Model of Argument Comprehension Sergio J. Alvarado, 2012-12-06 by Michael G Dyer Natural language processing NLP is an area of research within Artificial Intelligence AI concerned with the comprehension and generation of natural language text Comprehension involves the dynamic construction of conceptual representations linked by causal relationships and organized indexed for subsequent retrieval Once these conceptual representations have been created comprehension can be tested by means of such tasks as paraphrasing question answering and summarization Higher level cognitive tasks are also modeled within the NLP paradigm and include translation acquisition of word meanings and concepts through reading analysis of goals and plans in multi agent environments e g coalition and counterplanning behavior by narrative characters invention of novel stories recognition of abstract themes such as irony and hypocrisy extraction of the moral or point of a story and justification refutation of beliefs through argumentation The robustness of conceptually based text comprehension systems is directly related to the nature and scope of the knowledge constructs applied during conceptual analysis of the text Until recently conceptually based natural language systems were developed for and applied to the task of narrative comprehension Dyer 1983a Schank and Abelson 1977 Wilensky 1983 These systems worked by recognizing the goals and plans of narrative characters and using this knowledge to build a conceptual representation of the narrative xx UNDERSTANDING EDITORIAL TEXT including actions and intentions which must be inferred to complete the representation A large portion of text appearing in newspapers and magazines however is editorial in nature

UM99 User Modeling Judy Kay, 2014-05-04 User modeling researchers look for ways of enabling interactive software systems to adapt to their users by constructing maintaining and exploiting user models which are representations of properties of individual users User modeling has been found to enhance the effectiveness and or usability of software systems in a wide variety of situations Techniques for user modeling have been developed and evaluated by researchers in a number of fields including artificial intelligence education psychology linguistics human computer interaction and information science The biennial series of International Conferences on User Modeling provides a forum in which academic and industrial researchers from all of these fields can exchange their complementary insights on user modeling issues The published proceedings of these conferences represent a major source of information about developments in this area

The 1995 Goddard Conference on Space Applications of Artificial Intelligence and Emerging Information Technologies Carl F. Hostetter, 1995 [The Creative Process](#) Scott R. Turner, 2014-02-25 Someday computers will be artists They ll be able to write amusing and original stories invent and play games of unsurpassed complexity and inventiveness tell jokes and suffer writer s block But these things will require computers that can both achieve artistic goals and be creative Both capabilities are far from accomplished This book presents a theory of creativity that addresses some of the many hard problems which must be solved to build a creative computer It also presents an

exploration of the kinds of goals and plans needed to write simple short stories These theories have been implemented in a computer program called MINSTREL which tells stories about King Arthur and his knights While far from being the silicon author of the future MINSTREL does illuminate many of the interesting and difficult issues involved in constructing a creative computer The results presented here should be of interest to at least three different groups of people Artificial intelligence researchers should find this work an interesting application of symbolic AI to the problems of story telling and creativity Psychologists interested in creativity and imagination should benefit from the attempt to build a detailed explicit model of the creative process Finally authors and others interested in how people write should find MINSTREL s model of the author level writing process thought provoking

Computer Applications for Handling Legal Evidence, Police Investigation and Case Argumentation Ephraim Nissan,2012-06-15 This book provides an overview of computer techniques and tools especially from artificial intelligence AI for handling legal evidence police intelligence crime analysis or detection and forensic testing with a sustained discussion of methods for the modelling of reasoning and forming an opinion about the evidence methods for the modelling of argumentation and computational approaches to dealing with legal or any narratives By the 2000s the modelling of reasoning on legal evidence has emerged as a significant area within the well established field of AI Law An overview such as this one has never been attempted before It offers a panoramic view of topics techniques and tools It is more than a survey as topic after topic the reader can get a closer view of approaches and techniques One aim is to introduce practitioners of AI to the modelling legal evidence Another aim is to introduce legal professionals as well as the more technically oriented among law enforcement professionals or researchers in police science to information technology resources from which their own respective field stands to benefit Computer scientists must not blunder into design choices resulting in tools objectionable for legal professionals so it is important to be aware of ongoing controversies A survey is provided of argumentation tools or methods for reasoning about the evidence Another class of tools considered here is intended to assist in organisational aspects of managing of the evidence Moreover tools appropriate for crime detection intelligence and investigation include tools based on link analysis and data mining Concepts and techniques are introduced along with case studies So are areas in the forensic sciences Special chapters are devoted to VIRTOPSY a procedure for legal medicine and FLINTS a tool for the police This is both an introductory book possibly a textbook and a reference for specialists from various quarters

Language, Culture, Computation: Computing for the Humanities, Law, and Narratives Nachum Dershowitz,Ephraim Nissan,2014-12-04 This Festschrift volume is published in Honor of Yaacov Choueka on the occasion of his 75th birthday The present three volumes liber amicorum several years in gestation honours this outstanding Israeli computer scientist and is dedicated to him and to his scientific endeavours Yaacov s research has had a major impact not only within the walls of academia but also in the daily life of lay users of such technology that originated from his research An especially amazing aspect of the temporal span of his scholarly work is that half a century

after his influential research from the early 1960s a project in which he is currently involved is proving to be a sensation as will become apparent from what follows Yaacov Choueka began his research career in the theory of computer science dealing with basic questions regarding the relation between mathematical logic and automata theory From formal languages Yaacov moved to natural languages He was a founder of natural language processing in Israel developing numerous tools for Hebrew He is best known for his primary role together with Aviezri Fraenkel in the development of the Responsa Project one of the earliest fulltext retrieval systems in the world More recently he has headed the Friedberg Genizah Project which is bringing the treasures of the Cairo Genizah into the Digital Age This second part of the three volume set covers a range of topics related to the application of information technology in humanities law and narratives The papers are grouped in topical sections on humanities computing narratives and their formal representation history of ideas the numerate disciplines law computer law and legal computing

Shape Understanding System Zbigniew Les, Magdalena Les, 2008-01-11 This book presents the results of research into one of the most complex and difficult areas research into thinking and understanding The research was carried out at the newly founded Queen Jadwiga Research Institute of Understanding and is focused on the problem of visual understanding and visual thinking The authors believe this is the first book to attempt to investigate the complexity of visual thinking problems in the context of building the thinking machine

Knowledge Engineering: Fundamentals Hojjat Adeli, 1990 The first volume of Knowledge Engineering presents state of the art reviews and tutorials on fundamental aspects of knowledge engineering The second volume complements the first by presenting applications of applied artificial intelligence AI The field of applied AI and knowledge engineering is very young Students usually must refer to numerous sources to learn the fundamentals of the subject The two volumes attempt to present summaries of the various subjects in a single document and are oriented toward practical applications They are suitable as primary reference books in introductory courses on applied AI and knowledge engineering

The Functional Treatment of Parsing René Leermakers, 1993-07-31 Parsing technology traditionally consists of two branches which correspond to the two main application areas of context free grammars and their generalizations Efficient deterministic parsing algorithms have been developed for parsing programming languages and quite different algorithms are employed for analyzing natural language

The Functional Treatment of Parsing provides a functional framework within which the different traditional techniques are restated and unified. The resulting theory provides new recursive implementations of parsers for context free grammars. The new implementations called recursive ascent parsers avoid explicit manipulation of parse stacks and parse matrices and are in many ways superior to conventional implementations. They are applicable to grammars for programming languages as well as natural languages. The book has been written primarily for students and practitioners of parsing technology. With its emphasis on modern functional methods however the book will also be of benefit to scientists interested in functional programming. The Functional Treatment of Parsing is an excellent reference and can be used as a text for a course on the subject.
