new framework for understanding how our planet's two greatest existential threats come together, complement and amplify one another, and what can be done to mitigate future harm. In doing so, it posits three new modes of thinking. That climate change interacts with the social determinants of health and exacerbates existing health inequities. The idea of a consumption system, a network of policies, processes, governance, and modes of understanding that fuel unhealthy and environmentally destructive production and consumption. The steps necessary to move from denial and inertia toward effective mobilization, including economic, social, and policy interventions. With insights from physical science, social science, and humanities, this short book examines how climate change and social inequity are indelibly linked, and considering them together can bring about effective change in social equity, health, and the environment.

**Wittgenstein on Other Minds** Constantine Sandis, 2025-03-11. The book brings together Constantine Sandis's essays on Wittgenstein's approach to understanding others. Sandis sketches a picture of how his anti-scepticism with regard to the philosophical problem of other minds is not only compatible with but also supported by his scepticism concerning the real-life difficulty of understanding others and being understood by them. While each individual essay focuses on particular issues in Wittgenstein, including philosophical anthropology, interpersonal psychology, and animal concepts, they collectively paint a picture of what he takes the real problem of other minds to be, how to overcome it, and the limitations of our understanding. Sandis not only offers a fresh exegesis of Wittgenstein's public and private writings on these matters but proceeds to show the relevance of Wittgenstein beyond the academy.
