Systems,1985 Computing Methodologies Text Processing   Interoperating Geographic Information Systems Michael Goodchild,Max J. Egenhofer,Robin Fegeas,Cliff Kottman,2012-12-06 Geographic information systems have developed rapidly in the past decade and are now a major class of software with applications that include infrastructure maintenance resource management agriculture Earth science and planning But a lack of standards has led to a general inability for one GIS to interoperate with another It is difficult for one GIS to share data with another or for people trained on one system to adapt easily to the commands and user interface of another Failure to interoperate is a problem at many levels ranging from the purely technical to the semantic and the institutional Interoperating Geographic Information Systems is about efforts to improve the ability of GISs to interoperate and has been assembled through a collaboration between academic researchers and the software vendor community under the auspices of the US National Center for Geographic Information and Analysis and the Open GIS Consortium Inc It includes chapters on the basic principles and the various conceptual frameworks that the research community has developed to think about the problem Other chapters review a wide range of applications and the experiences of the authors in trying to achieve interoperability at a practical level Interoperability opens enormous potential for new ways of using GIS and new mechanisms for exchanging data and these are covered in chapters on information marketplaces with special reference to geographic information Institutional arrangements are also likely to be profoundly affected by the trend towards interoperable systems and nowhere is the impact of interoperability more likely to cause fundamental change than in education as educators address the needs of a new generation of GIS users with access to a new generation of tools The book concludes with a series of chapters on education and institutional change Interoperating Geographic Information Systems is suitable asa secondary text for graduate level courses in computer science geography spatial databases and interoperability and as a reference for researchers and practitioners in industry commerce and government   Advances in Computer Graphics V Werner Purgathofer,Jürgen Schönhut,2012-12-06 This book collects together several of the tutorials held at EUROGRAPHICS 89 in Hamburg The conference was held under the motto Integration Visualisation Interaction and the tutorials reflect the conference theme The Springer series EurographicSeminars with the volumes Advances in Computer Graphics regularly provides a professional update on current mainstream topics in the field These publications give readers the opportunity to inform themselves thoroughly on the topics covered The success of the series is mainly based on the expertise of the contributing authors who are recognized professionals in their field Starting out with one of the conference s main topics the chapter Visualization of Scientific Data gives an overview of methods for displaying scientific results in an easily surveyable and comprehensible form It presents algorithms and methods utilized to achieve visualization results in a form adequate for humans User interfaces for such systems are also explored and practical conclusions are drawn The chapter Color in Computer Graphics describes the problems of manipulating and matching color in the real world After some fundamental statements about color models and their relationships the main

emphasis is placed on the problem of objective color specification for computer graphics systems It is very hard to match colors between devices such as scanners printers and displays Some suggestions on the effective use of color for graphics are also made **Understanding PostScript** David A.
