Hermenegildo, J. Maluszynski, 2006-12-31 Coordinating production across a supply chain designing a

new VLSI chip allocating classrooms or scheduling maintenance crews at an airport are just a few examples of complex combinatorial problems that can be modeled as a set of decision variables whose values are subject to a set of constraints. The decision variables may be the time when production of a particular lot will start or the plane that a maintenance crew will be working on at a given time. Constraints may range from the number of students you can't in a given classroom to the time it takes to transfer a lot from one plant to another. Despite advances in computing power, many forms of these and other combinatorial problems have continued to defy conventional programming approaches. Constraint Logic Programming (CLP) first emerged in the mid eighties as a programming technique with the potential of significantly reducing the time it takes to develop practical solutions to many of these problems by combining the expressiveness of languages such as Prolog with the computational power of constrained search. While the roots of CLP can be traced to Monash University in Australia, it is without any doubt in Europe that this new software technology has gained the most prominence, benefiting among other things from sustained funding from both industry and public R D programs over the past dozen years. These investments have already paid off, resulting in a number of popular commercial solutions as well as the creation of several successful European startups.

The Godel Programming Language Patricia Hill, John W. Lloyd, 1994-04. Godel is a new general purpose declarative programming language that is based on the paradigm of logic programming and can be regarded as a successor to Prolog. This book gives a tutorial overview of Godel, presents example programs, provides a formal definition of the syntax and semantics of the language, and covers background material on logic. The Godel language supports types and modules. It has a rich collection of system modules and provides constraint solving in several domains. It also offers metalogical facilities that provide significant support for metaprograms that do analysis, transformation, compilation, verification, debugging, and the like. The declarative nature of Godel makes it well suited for use as a teaching language, narrows the gap that currently exists between theory and practice in logic programming, makes possible advanced software engineering tools such as declarative debuggers and compiler generators, reduces the effort involved in providing a parallel implementation of the language, and offers substantial scope for parallelization in such implementations.

Logic Programming series **Programming Languages Implementation and Logic Programming**, 1992 **Algebraic Methodology and Software Technology** Michael Johnson, Dusko Pavlovic, 2011-01-14. This book constitutes the refereed proceedings of the 13th International Conference on Algebraic Methodology and Software Technology (AMAST 2010) held in Lac Beauport, QC, Canada, in June 2010. The 14 revised full papers presented were carefully reviewed and selected from 33 submissions. The papers are organized in 1 invited paper, 10 contributed research papers, and 4 system demonstrations.

Natural Language Understanding and Logic Programming, II Veronica Dahl, Patrick Saint-Dizier, 1988. Natural language semantics and pragmatics are now two major fields in linguistics, philosophy, artificial intelligence, and computational linguistics. With the development of large and efficient Prolog interpreters and compilers, and with the expansion of the theoretical aspects of logic programming, the study

of natural language semantics and related pragmatic aspects is now becoming a very attractive topic. The proceedings of this workshop reflect these trends. The papers cover almost all the current research fields in natural language including morphology, syntax, parser design, generation, feature checking and specification, semantic representations and construction of cooperative responses. Articles on syntax deal with constraints to parsing and generation, rule pruning and comparison of logic based language systems. The material on the compilers involves functional logic grammars and unification based grammars. The work on semantics investigates logico semantic induction, data semantics, comparatives, conceptual graphs, discourse representation and graphs. Papers on pragmatics discuss disambiguation, cooperation with the user through integrity constraints and question interpretation through epistemic reasoning. Panel discussions are centered around future directions of research as well as comparisons between different points of view about actual research projects.

Theoretical Aspects of Computing - ICTAC 2005 Dang Van Hung, Martin Wirsing, 2005-10-21. This volume contains the proceedings of ICTAC 2005, the second ICTAC International Colloquium on Theoretical Aspects of Computing. ICTAC 2005 took place in Hanoi, Vietnam, October 17-21, 2005. ICTAC was founded by the International Institute for Software Technology of the United Nations University (UNU-IIST) to serve as a forum for practitioners, lecturers and researchers from academia, industry and government who are interested in theoretical aspects of computing and rigorous approaches to software engineering. The colloquium is aimed particularly but not exclusively at participants from developing countries. We believe that this will help developing countries to strengthen their research, teaching and development in computer science and engineering, improve the links between developing countries and developed countries and establish collaboration in research and education. By providing a venue for the discussion of common problems and their solutions and for the exchange of experiences and ideas, this colloquium supports research and development in computer science and software technology. ICTAC is attracting more and more attention from more and more countries.

Database and Expert Systems Applications A. Min Tjoa, Isidro Ramos, 2012-12-06. The Database and Expert Systems Application (DEXA) conferences are mainly oriented to establish a state of the art forum on Database and Expert System applications. But Practice without Theory has no sense as Leonardo said five centuries ago. In this Conference we try a compromise between these two complementary aspects. A total of 5 sessions are application oriented ranging from classical applications to more unusual ones in Software Engineering. Recent research aspects in Databases such as activity, deductivity and or Object Orientation are also present in DEXA 92 as well as the implication of the new data models such as OO Model, Deductive Model etc included in the Modelling sessions. Other areas of interest such as Hyper Text and Multimedia application together with the classical field of Information Retrieval are also considered. Finally, Implementation Aspects are reflected in very concrete fields. A total of nearly 200 papers submitted from all over the world were sent to DEXA 92. Only 90 could be accepted. A Poster session has also been established. DEXA 90 was held in Vienna, Austria. DEXA 91 in Berlin, Germany and DEXA 92 will take place in Valencia, Spain.
