**Visual Thinking in Mathematics** Marcus Giaquinto, 2007-07-05 Visual thinking visual imagination or perception of diagrams and symbol arrays and mental operations on them is omnipresent in mathematics Is this visual thinking merely a psychological aid facilitating grasp of what is gathered by other means Or does it also have epistemological functions as a means of discovery understanding and even proof By examining the many kinds of visual representation in mathematics and the diverse ways in which they are used Marcus Giaquinto argues that visual thinking in mathematics is rarely just a superfluous aid it usually has epistemological value often as a means of discovery Drawing from philosophical work on the nature of concepts and from empirical studies of visual perception mental imagery and numerical cognition Giaquinto explores a major source of our grasp of mathematics using examples from basic geometry arithmetic algebra and real analysis He shows how we can discern abstract general truths by means of specific images how synthetic a priori knowledge is possible and how visual means can help us grasp abstract structures Visual Thinking in Mathematics reopens the investigation of earlier thinkers from Plato to Kant into the nature and epistemology of an individual's basic mathematical beliefs and abilities in the new light shed by the maturing cognitive sciences Clear and concise throughout it will appeal to scholars and students of philosophy mathematics and psychology as well as anyone with an interest in mathematical thinking
