Wireless Lan Systems:

Wireless LAN Systems Asunción Santamaría, F. J. López-Hernández, 1994 This guide to wireless LAN systems describes the current technologies spells out the pros and cons of each and offers implementation insights that can save your company valuable installation time money and effort It provides in depth analyses of all aspects of indoor LAN wireless transmission techniques via RF and infrared waves

Smart Antenna Systems and Wireless LANs Garret Okamoto, 2013-04-26 This book concerns two major topics smart antenna systems and wireless local area networks LANs For smart antenna systems it discusses the mechanics behind a smart antenna system the setup of a smart antenna experimental testbed and experimental and computer simulation results of various issues relating to smart antenna systems For wireless LAN systems it discusses the IEEE 802.11 worldwide wireless LAN standard the operation of a wireless LAN system and some of the technical considerations that must be overcome by a wireless LAN system designer These two topics are combined in the discussion of the Smart Wireless LAN SWL system which was designed to achieve the benefits which smart antenna systems can provide for wireless LAN systems while still remaining compatible with the 802.11 wireless LAN standard The design of SWL calls for the replacement of the conventional wireless LAN base station which are called access points in the 802.11 documentation with an SWL base station while leaving the individual terminal operation as unchanged as possible

Wireless LAN Radios Arya Behzad, 2007-12-14 Wireless LAN Radios presents a sophisticated overview of the subject covering theory while also emphasizing the practical aspects of this promising technology Coverage includes 802.11 flavors and system requirements receiver and transmitter radio architectures analog impairments and issues key radio building blocks calibration techniques case studies and a brief discussion of 802.11n It offers a meaningful presentation of real world issues facing designers engineers theorists and researchers working in this industry

Fazel Radio System Design German Aerospace Center DLR Marconi Communications Institute of Communications and Navigation D 71522 Backnang Germany D 82234 Wessling Germany We are currently observing that frequency spectrum is a limited and valuable resource for wireless mobile communications A good example can be observed among European network operators for the prices to pay for frequency bands for UMTS IMT2000 Keeping this in mind the first goal when designing future wireless communication systems has to be the increase in spectral efficiency by allowing higher flexibility for the system design and deployment The development in digital communications in the past years has enabled efficient modulation and coding techniques for robust and spectral efficient data speech audio and video transmission Here we should mention two interesting and successful techniques These are the multi carrier modulation e g OFDM and the spread spectrum technique e g DS CDMA During the last decade of this millennium the technique of multi carrier transmission for wireless broadband multimedia applications has received wide interest Its first great success was in 1990 as it was selected for the European Digital Audio Broadcasting DAB standard Its further prominent success was in 1995 and 1998 as it was selected as modulation scheme for the European Digital Video Broadcasting DVB T standard and in three broadband wireless indoor standards namely European ETSI HIPERLAN 2 American IEEE 802 11a and Japanese MMAC respectively

Wireless LANs Raymond P. Wenig,1996 A complete guide to the ins and outs of field based computing this book covers planning implementing and operating a successful wireless LAN It also includes coverage of radio wave infrared and microwave networks

Design and Performance of 3G Wireless Networks and Wireless LANs Mooi Choo Chuah,Qinqing Zhang,2005-09-16 Presentation of background material of wireless communications traffic modeling and traffic engineering techniques Provides descriptions of upcoming features such as IP multimedia subsystems multimedia broadcast multicast services and Push to Talk over Cellular PoC for 3G networks Including problems at the end of each chapter Written for lecturers graduate students and system designers
