Transactions on Rough Sets IV James F. Peters,2005-11-15 Volume IV of the Transactions on Rough Sets TRS introduces a number of new advances in the theory and application of rough sets Rough sets and

proximations spaces were introduced more than 30 years ago by Zdzisław Pawlak. These advances have profound implications in a number of research areas such as the foundations of rough sets, approximate reasoning, artificial intelligence, bioinformatics, computational intelligence, cognitive science, intelligent systems, data mining, machine intelligence, and security. In addition, it is evident from the papers included in this volume that the foundations and applications of rough sets is a very active research area worldwide. A total of 16 researchers from 7 countries are represented in this volume, namely Canada, India, Norway, Sweden, Poland, Russia, and the United States of America. Evidence of the vigor, breadth, and depth of research in the theory and applications of rough sets can be found in the 10 articles in this volume. Prof. Pawlak has contributed a treatise on the philosophical underpinnings of rough sets. In this treatise, observations are made about the Cantor notion of a set, antinomies arising from Cantor sets, the problem of vagueness, especially vague, imprecise concepts, fuzzy sets, rough sets, fuzzy vs. rough sets, as well as logic and rough sets. Among the many vistas and research directions suggested by Prof. Pawlak, one of the most fruitful concerns the model for a rough membership function, which was incarnated in many different forms since its introduction by Pawlak and Skowron in 1994. Recall here that Prof. **Power**, 1908, *Jesus the Messiah, Being an Abridged Edition of 'The Life and Times of Jesus the Messiah'*, Alfred Edersheim, 1890, **New Edition of the Babylonian Talmud: Section Jurisprudence (Damages), tract Baba Metzia (Middle gate)**, Michael Levi Rodkinson, 1900, **Moore v.
