and the spread of civil conflicts in Ukraine either of which could lead to an influx of refugees into Western Europe or the need for greater Western involvement in the region An American National Intelligence report reflecting the view of the American intelligence community and the State Department the details of which were leaked to the press at the end of January 1994 supports this concern mentioning that Ukraine was the most likely former Soviet republic to precipitate a major continentwide crisis Western commentaries frequently refer to a number of actual or potential threats to Ukraine stability These include continuing economic decline which has led to growing social distress and great dissatisfaction among the population an increase in ethnic tensions and their potential transformation into communal conflict centrifugal trends sometimes linked to ethnic grievances resulting in autonomist or separatist movements weak and discredited political institutions and widespread political apathy which could leave the country open to the rise of authoritarian rulers or outside interference in its internal affairs and a growth in tensions between Ukraine and Russia An examination of the factors influencing Ukraine's stability should also devote some attention to the behavior of institutions such as the military and security forces that can play an important role in deterring attempts to destabilize the situation in Ukraine or can themselves become destabilizing forces in certain circumstances
