Stable Parametric Programming S. Zlobec,2013-11-21 Optimality and stability are two important notions in applied mathematics This book is a study of these notions and their relationship in linear and convex parametric programming models It begins with a survey of basic optimality conditions in nonlinear programming Then new results in convex programming using LFS functions for single objective multi objective differentiable and non smooth programs are introduced Parametric programming models are studied using basic tools of point to set topology Stability of the models is introduced essentially as continuity of the feasible set of decision variables under continuous perturbations of the parameters Perturbations that preserve this continuity are regions of stability It is shown how these regions can be identified The main results on stability are characterizations of locally and globally optimal parameters for stable and also for unstable perturbations The results are straightened for linear models and bi level programs Some of the results are extended to abstract spaces after considering parameters as controls Illustrations from diverse fields such as data envelopment analysis management von Stackelberg games of market economy and navigation problems are given and several case studies are solved by finding optimal parameters The book has been written in an analytic spirit Many results appear here for the first time in book form Audience The book is written at the level of a first year graduate course in optimization for students with varied backgrounds interested in modeling of real life problems It is expected that the reader has been exposed to a prior elementary course in optimization such as linear or non linear programming The last section of the book requires some knowledge of functional analysis   **Stable Parametric Programming** S. prior elementary course in optimization such as linear or non linear programming The last section of the book requires some knowledge of functional analysis *Stable Convex Parametric Programming and Applications* Refugio Trujillo-Cortez,2000 The results on stability are applied for bilevel convex models and an algorithm for solving these models based on a marginal value formula is suggested and then applied to a real life problem in the petroleum industry **Encyclopedia of Optimization** Christodoulos A. Floudas,Panos M. Pardalos,2008-09-04 The goal of the Encyclopedia of Optimization is to introduce the reader to a complete set of topics that show the spectrum of research the richness of ideas and the breadth of applications that has come from this field The second edition builds on the success of the former edition with more than 150 completely new entries designed to ensure that the reference addresses recent areas where optimization theories and techniques have advanced Particularly heavy attention resulted in health science and transportation with entries such as Algorithms for Genomics Optimization and Radiotherapy Treatment Design and Crew Scheduling **Multilevel Optimization: Algorithms and Applications** A. Migdalas,Panos M. Pardalos,Peter Värbrand,2013-12-01 Researchers working with nonlinear programming often claim the word is non linear indicating that real applications require nonlinear modeling The same is true for other areas such as multi objective programming there are always several goals in a real application stochastic programming all data is uncer tain and therefore stochastic models should be used and so forth In this spirit we claim The word is multilevel In many decision processes there is a hierarchy of decision makers and decisions are made at different levels in this hierarchy One way to handle such hierar chies is to focus on one level and include other levels behaviors as assumptions Multilevel programming is the research area that focuses on the whole hierar chy structure In terms of modeling the constraint domain associated with a multilevel programming problem is implicitly determined by a series of opti mization problems which must be solved in a predetermined sequence If only two levels are considered we have one leader associated with the upper level and one follower associated with the lower level **Sensitivity, Stability, and Parametric Analysis** Anthony V.
