Interactively Exploring High-Dimensional Data and Models in R Dianne Cook, Ursula Laa, 2026-04-07 Most data arrive with more than two numeric variables which means that plotting it on a computer screen or printed page presents a challenge how do you visually explore for associations between more than two variables Visualising data provides the opportunity to discover what we never expected because it requires fewer assumptions to be made Visualising elements of a model fit is a primary way to diagnose whether the fit matches this data Two of more numeric variables is considered to be multivariate data and when there are substantially more we would consider it to be high dimensional data This book provides you with the tools to visually explore high dimensions to uncover associations clustering and anomalies that may be missed when only using common methods for plotting one or two variables It also illustrates how to use visualisation to understand how your model is operating on the data to be able to explain how it is arriving at decisions To make effective use of this material the reader should have a basic working knowledge of R and some understanding of multivariate statistical methods or machine learning methods The book could form an independent course on visualization or be used as part of courses on multivariate statistical methods or machine learning High dimensional data visualisation is valuable for understanding dimension reduction methods unsupervised and supervised classification This book is organised into these three topics following overview and introductory chapters The dimension reduction chapters cover principal component analysis and nonlinear dimension reduction The chapters on cluster analysis cover hierarchical and k means algorithms model based and self organising maps and finish with ways to communicate results and how to compare different results The chapters on classification cover linear discriminant analysis tree and forest algorithms support vector machines and neural networks We explain how to break down a neural network to examine the components how to visualize predictive probabilities and how to incorporate explainable AI metrics to develop a deeper understanding about how the model operates

Handbook of e-Tourism Zheng Xiang, Matthias Fuchs, Ulrike Gretzel, Wolfram Höpken, 2022-09-01 This handbook provides an authoritative and truly comprehensive overview both of the diverse applications of information and communication technologies ICTs within the travel and tourism industry and of e tourism as a field of scientific inquiry that

has grown and matured beyond recognition. Leading experts from around the world describe cutting edge ideas and developments, present key concepts and theories, and discuss the full range of research methods. The coverage accordingly encompasses everything from big data and analytics to psychology, user behavior, online marketing, supply chain and operations management, smart business networks, policy and regulatory issues, and much, much more. The goal is to provide an outstanding reference that summarizes and synthesizes current knowledge and establishes the theoretical and methodological foundations for further study of the role of ICTs in travel and tourism. The handbook will meet the needs of researchers and students in various disciplines, as well as industry professionals. As with all volumes in Springer's Major Reference Works program, readers will benefit from access to a continually updated online version.

GeoSpatial Semantics Frederico Fonseca, M. Andrea Rodriguez, Sergei Levashkin, 2007-11-17. This book constitutes the refereed proceedings of the Second International Conference on GeoSpatial Semantics (GeoS 2007) held in Mexico City, Mexico, in November 2007. The papers are organized in topical sections on models and languages for geo-ontologies, alignment and integration of geo-ontologies, ontology-based spatial information retrieval, formal representation for geospatial data, and integration of semantics into spatial query processing. *Journal on Data Semantics XI* Philippe Thiran, Jeff Z. Pan, Stefano Spaccapietra, Steffen Staab, Terry Halpin, Pavel Shvaiko, Vojtech Svatek, John F. Roddick, 2008-12-09. The LNCS Journal on Data Semantics is devoted to the presentation of notable work that in one way or another addresses research and development on issues related to data semantics. The scope of the journal ranges from theories supporting the formal definition of semantic content to innovative domain-specific applications of semantic knowledge. The journal addresses researchers and advanced practitioners working on the semantic web, interoperability, mobile information services, data warehousing, knowledge representation and reasoning, conceptual database modeling, ontologies, and artificial intelligence. Volume XI contains extended versions of eight revised and selected papers from several international workshops in the field which took place in 2006. *Design and Implementation of Large Spatial Databases*, 1990. The most recent developments in spatial data management are reported in these proceedings. SSD 89 brought together computer scientists and experts from application areas such as geography, computer vision, robotics, computer-aided manufacturing, and environmental information systems. This proceedings volume includes subjects such as extensible database systems, spatial data structures, an index structure, spatial reasoning, geographic information systems, quadtrees, and thematic map modeling. Spatial Databases

Philippe Rigaux,2002 [GIS World Sourcebook 1995](#) [Anonymus AC01149836],1994 **Spatial Database Systems** Albert

K.W. Yeung, G. Brent Hall, 2007-05-23 The decision to write this book was motivated by a number of factors First although several useful textbooks on spatial databases have recently been published this is an area of spatial information science that has lagged somewhat behind the rapid advances of the technology and the profusion of books on domain specific applications Second much of the information pertaining to spatial database technologies is only available in scattered journal papers and conference proceedings and prior to this book no single effort has been made to sift through this expansive literature and unite the key contributions in a single volume The tasks of sourcing and coherently integrating relevant contributions is daunting for students many of whom have a substantial number of competing demands placed on them This book should make the task of knowledge building less daunting Third and perhaps most importantly an apparent trend in many spatial information science programs is to focus from first or second year undergraduate through to fourth year courses on learning to work confidently and independently with increasingly complex software tools Hence many courses are technical in nature and while they continue to produce technically adept students knowledge of the broader aspects of spatial databases is often not as complete as it might be among graduates Some programs have sought to address this by introducing courses that focus on spatial data management However these courses are largely unsupported by a relevant and contemporary textbook

Spatial Data Management Nikos Mamoulis, 2022-06-01 Spatial database management deals with the storage indexing and querying of data with spatial features such as location and geometric extent Many applications require the efficient management of spatial data including Geographic Information Systems Computer Aided Design and Location Based Services The goal of this book is to provide the reader with an overview of spatial data management technology with an emphasis on indexing and search techniques It first introduces spatial data models and queries and discusses the main issues of extending a database system to support spatial data It presents indexing approaches for spatial data with a focus on the R tree Query evaluation and optimization techniques for the most popular spatial query types selections nearest neighbor search and spatial joins are portrayed for data in Euclidean spaces and spatial networks The book concludes by demonstrating the ample application of spatial data management technology on a wide range of related application domains management of spatio temporal data and high dimensional feature vectors multi criteria ranking data mining and OLAP privacy preserving data publishing and spatial keyword search Table of Contents Introduction Spatial Data Indexing Spatial Query Evaluation Spatial Networks Applications of Spatial Data Management Technology
