Anaphora and Conceptual Structure Karen van Hoek, 1997-09-02 Karen van Hoek presents a cogent analysis of the classic problem of constraints on pronominal anaphora within the framework of Cognitive Grammar Van Hoek proceeds from the position that grammatical structure can be characterized in terms of semantic and phonological representations without autonomous syntactic structures or principles such as tree structures or c command She argues that constraints on anaphora can be explained in terms of semantic interactions between nominals and the contexts in which they are embedded Integrating the results of previous work Van Hoek develops a model in which some nominals function as conceptual reference points that dominate over stretches defined by the semantic relations among elements When a full noun is in the domain of a reference point coreference is ruled out since the speaker would be sending contradictory messages about the salience of the noun's referent With profound implications for the nature of syntax this book will interest theoretical linguists of all persuasions Tense Bernard Comrie, 1985-06-06 Bernard Comrie introduces readers to the range of variation found in tense systems across the languages of the world Stock Assessment for Fishery Management Daniel D. Hoggarth, 2006-01-01 Provides guidelines for fish stock assessment and fishery management using the software tools developed by the UK's Department for International Development's Fisheries Management Science Programme This report explains some key elements of the precautionary approach to fisheries management and outlines a range of alternative stock assessment approaches **Behavioral Economics** Edward Cartwright, 2018-01-23 Over the last few decades behavioral economics has revolutionized the discipline It has done so by putting the human back into economics by recognizing that people sometimes make mistakes care about others and are generally not as cold and calculating as economists have traditionally assumed The results have been exciting and fascinating and have fundamentally changed the way we look at economic behavior This textbook introduces all the key results and insights of behavioral economics to a student audience Ideas such as mental accounting prospect theory present bias inequality aversion and learning are explained in detail These ideas are also applied in diverse settings such as auctions stock market crashes charitable donations and health care to show why behavioral economics is crucial to understanding the world around us Consideration is also given to what makes people happy and how we can potentially nudge people to be happier This new edition contains expanded and updated coverage of contract theory bargaining in the family time and risk and stochastic reference points among other topics to ensure that readers are kept up to speed with this fast paced field The companion website is also updated with a range of new questions and worked examples This book remains the ideal introduction to behavioral economics for advanced undergraduate and graduate students *An Officer's Notes* Ralph Middleton Parker, 1917 **Productive Learning** Stanislaw D. Glazek, Seymour B. Sarason, 2006-09-01 Fans and disciples of Seymour Sarason all know that education reform needs a change in course Indeed the daily practices of schools education research and US educational policy all need such a change

Neither Professors Glazek and Sarason nor anyone else can give yet a complete description of what these changes would involve. But when the change happens, the leaders of the change will all acknowledge their considerable debt to this book. The reason is that the needed change in school classrooms will be very hard to recognize as such unless these leaders are thoroughly familiar with the concept of a context of productive learning. In this book, Glazek and Sarason collaborated on an extraordinarily daunting attempt to create and analyze a context of productive learning in which simultaneously Sarason was the student and Glazek the teacher and vice versa. They attempted what must surely be a Mt. Everest example of the concept: explanation of Einstein's famous formula $E = mc^2$. The result should be of intense interest to a broad audience concerned with the present problems of science education as well as the nature of a context of productive learning.

Kenneth G. Wilson, H. C. Youngberg, Trustees, Distinguished Professor, Nobel Laureate for Physics, 1982, Department of Physics, The Ohio State University. By making accessible and intelligible Einstein's theory of relativity, this remarkable book reveals to its readers the power and possibility of their own learning and, in doing so, brilliantly demonstrates the power and necessity of productive learning for everyone.

Andy Hargreaves, Thomas More Brennan Chair in Education, Lynch School of Education, Boston College. Professors Glazek and Sarason have written a creative and instructive book that will be read for years to come. Drawing upon their backgrounds in physics and psychology, they support Einstein's recommendations as to the importance of the humanities. The authors' purpose is to help readers acquire a substantive grasp of how Einstein accomplished what he did and the implications of this for educational reform. The reader's view of teaching and learning will be forever changed by the authors' insights.

Dale L. Brubaker, Professor, University of North Carolina. This is an interesting and provocative book written by a psychologist with several thousands of hours of observation and analysis of classroom teaching in public schools and a physicist. The book starts with a critique of teaching in our schools and explains why educational reform has been so minimal in its effects. The movie *Mr. Holland's Opus* is used as a distinguisher between good and bad teaching methodology. These chapters are followed by physics chapters on the foundation of Einstein's $E = mc^2$. The authors follow Einstein's thinking and use the features of light as a vehicle for their discussion. They fold in stories and shy away from formulas which they leave for appendices. The book ends with a chapter on the philosophy of teaching. The book is well written and eminently readable; the arguments are easy to follow. I recommend the book to anyone interested in the basis of modern physics and Einstein's role in it.

Ernest M. Henley, Professor Emeritus of Physics, University of Washington. Use the concept of productive learning to reframe school reform. Why do people, college bound or even in college, stay away in droves from courses in science, especially physics? Why do people know so little about the significance of Einstein's contributions, which require dramatic changes in how we understand ourselves, our world, and the entire universe? Why have educational reforms failed? In this book, two professors, one a particle physicist and the other a psychologist, confront these questions in a unique way based on the assumption that people can grasp, on a non-superficial level, what Einstein did in 1905 if and only if the features of productive learning are

taken seriously The authors make clear that those features are applicable in teaching any subject matter by devoting two chapters to music and other arts In the case of science they chose Einstein s work precisely because of the general belief that it cannot be assimilated by ordinary mortals whose brains are not wired to comprehend the ways in which time mass energy and the speed of light are seamlessly interrelated But this book is not an attempt to popularize Einstein Its goal is to demonstrate that features of the context of productive learning are applicable to any teacher student relationship regardless of whether the student is in first grade in high school or in college Einstein s work was about alignment of frames of reference of observers in physics A similar process of alignment between the minds of a student and a teacher is the vehicle of productive learning The book explains the analogy The authors discuss and emphasize that educational reform will continue to fail as long as the concept of learning is fuzzy and provides no direction to the teacher student relationship Reform efforts will continue to fail unless and until they are based on a clear distinction between contexts of productive and unproductive learning
