What is cerebrospinal fluid?

Cerebrospinal fluid (CSF) is a fluid present in the ventricles of the brain, cisterns of the brain, and subarachnoid space. It acts as a shock absorber for the brain, provides nutrients, and removes waste. It is produced in the choroid plexus of the ventricles and circulates through the ventricular system and subarachnoid space.

What is the central nervous system?

The central nervous system (CNS) consists of the brain and spinal cord. It is responsible for processing and coordinating sensory and motor information. The brain is divided into the cerebrum, cerebellum, and brainstem. The spinal cord is a long, thin, tube-like structure that runs down the back, protecting the spinal cord. It is composed of 31 pairs of spinal nerves that branch out to the rest of the body.

What are synaptic connections?

Synaptic connections are the points where neurons meet and communicate. They are formed by the axon terminals of one neuron and the dendrites of another neuron. The axon terminals release neurotransmitters that bind to receptors on the dendrites, triggering an action potential in the next neuron.

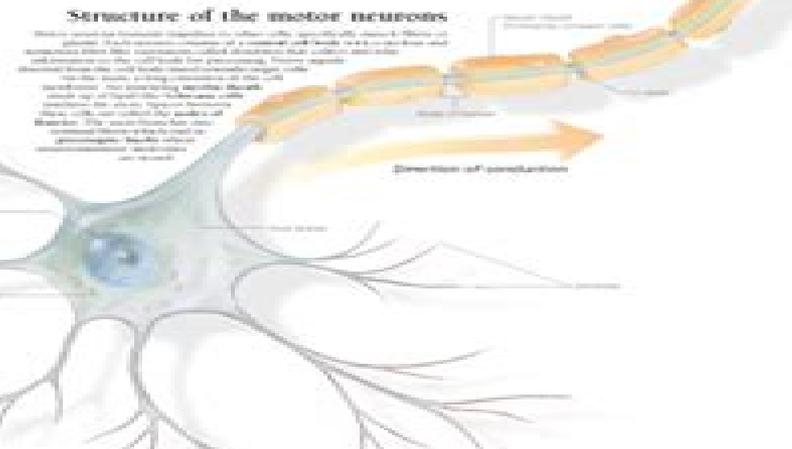

The spinal cord and nerves

The spinal cord is a long, thin, tube-like structure that runs down the back, protecting the spinal cord. It is composed of 31 pairs of spinal nerves that branch out to the rest of the body. The spinal cord is responsible for processing and coordinating sensory and motor information.

Neurological disorders

Changes in the normal function of the brain, spinal cord, or peripheral nerves can lead to a variety of neurological disorders. Some common examples include:

- Parkinson's disease:** A neurodegenerative disorder that affects movement.
- Alzheimer's disease:** A neurodegenerative disorder that causes memory loss and cognitive decline.
- Epilepsy:** A disorder characterized by recurrent, unprovoked seizures.
- Stroke:** A sudden interruption of blood flow to the brain, leading to brain damage.
- Multiple sclerosis:** A chronic autoimmune disease that affects the central nervous system.
- Huntington's disease:** A genetic disorder that causes involuntary movements and cognitive decline.
- Tourette syndrome:** A neurodevelopmental disorder characterized by repetitive, involuntary movements and vocalizations.
- Chorea:** A movement disorder characterized by involuntary, jerky movements.
- Dystonia:** A movement disorder characterized by involuntary muscle contractions.
- Ataxia:** A disorder characterized by a lack of muscle coordination.
- Spina Bifida:** A congenital disorder where the spinal cord and meninges do not develop properly.
- Spina Muscularis Atrophica:** A group of genetic disorders that affect the muscles.
- Myasthenia Gravis:** An autoimmune disorder that affects the neuromuscular junction.
- Botulism:** A rare but serious illness caused by a toxin produced by the bacterium Clostridium botulinum.
- Polio:** A viral infection that can cause paralysis.
- Creutzfeldt-Jakob Disease:** A rare, fatal brain disorder.
- Prion Diseases:** A group of neurodegenerative disorders caused by misfolded proteins.
- Alzheimer's Disease:** A neurodegenerative disorder that causes memory loss and cognitive decline.
- Parkinson's Disease:** A neurodegenerative disorder that affects movement.
- Huntington's Disease:** A genetic disorder that causes involuntary movements and cognitive decline.
