Image and Video Compression Madhuri A. Joshi,Mehul S. Raval,Yogesh H. Dandawate,Kalyani R. Joshi,Shilpa P. Metkar,2014-11-17 Image and video signals require large transmission bandwidth and storage leading to high costs The data must be compressed without a loss or with a small loss of quality Thus efficient image and video compression algorithms play a significant role in the storage and transmission of data Image and Video Compression Fundamentals Techniques and

Real-Time Video Compression Raymond Westwater,Borko Furht,2007-08-28 Real Time Video Compression Techniques and Algorithms introduces the XYZ video compression technique which operates in three dimensions eliminating the overhead of motion estimation First video compression standards MPEG and H 261 H 263 are described They both use asymmetric compression algorithms based on motion estimation Their encoders are much more complex than decoders The XYZ technique uses a symmetric algorithm based on the Three Dimensional Discrete Cosine Transform 3D DCT 3D DCT was originally suggested for compression about twenty years ago however at that time the computational complexity of the algorithm was too high it required large buffer memory and was not as effective as motion estimation We have resurrected the 3D DCT based video compression algorithm by developing several enhancements to the original algorithm These enhancements make the algorithm feasible for real time video compression in applications such as video on demand interactive multimedia and videoconferencing The demonstrated results presented in this book suggest that the XYZ video compression technique is not

only a fast algorithm but also provides superior compression ratios and high quality of the video compared to existing standard techniques such as MPEG and H 261 H 263 The elegance of the XYZ technique is in its simplicity which leads to inexpensive VLSI implementation of any XYZ codec Real Time Video Compression Techniques and Algorithms can be used as a text for graduate students and researchers working in the area of real time video compression In addition the book serves as an essential reference for professionals in the field *Image and Video Compression for Multimedia Engineering* Yun-Qing Shi,Huifang Sun,2019-03-07 The latest edition provides a comprehensive foundation for image and video compression It covers HEVC H 265 and future video coding activities in addition to Internet Video Coding The book features updated chapters and content along with several new chapters and sections It adheres to the current international standards including the JPEG standard **H.264 and MPEG-4 Video Compression** Iain E. Richardson,2008 **Encyclopedia of Multimedia** Borko Furht,2008-11-26 This second edition provides easy access to important concepts issues and technology trends in the field of multimedia technologies systems techniques and applications Over 1 100 heavily illustrated pages including 80 new entries present concise overviews of all aspects of software systems web tools and hardware that enable video audio and developing media to be shared and delivered electronically *Image and Video Compression for Multimedia Engineering* Yun Q. Shi,Huifang Sun,1999-12-20 Advanced technologies have increased demands for visual information and higher quality video frames as with 3 D movies games and HDTV This taxes the available technologies and creates a gap between the huge amount of visual data required for multimedia applications and the still limited hardware capabilities *Image and Video Compression for Multimedia Engineering* bridges the gap with concise authoritative information on video and image coding The tutorial provides a solid comprehensive understanding of the fundamentals and algorithms of coding and details all of the relevant international coding standards It presents recent findings on defining methods for generating high quality video bitstreams The authors present recent research results and cover emerging technologies With the growing popularity of the applications that use large amounts of visual data image and video coding is an active and dynamic field Coverage of both image and video compression in this book yields a unique self contained reference appropriate for all related professions *Image and Video Compression for Multimedia Engineering* builds a basis for future study research and development *Image and Video Compression Standards* Vasudev Bhaskaran,Konstantinos Konstantinides,2012-12-06 New to the Second Edition offers the latest developments in standards activities JPEG LS MPEG 4 MPEG 7 and H 263 provides a comprehensive review of recent activities on multimedia enhanced processors multimedia coprocessors and dedicated processors including examples from industry *Image and Video Compression Standards Algorithms and Architectures* Second Edition presents an introduction to the algorithms and architectures that form the underpinnings of the image and video compressions standards including JPEG compression of still images H 261 and H 263 video conferencing and MPEG 1 and MPEG 2 video storage and broadcasting The next generation of audiovisual coding standards such as MPEG 4 and MPEG

7 are also briefly described. In addition, the book covers the MPEG and Dolby AC 3 audio coding standards and emerging techniques for image and video compression such as those based on wavelets and vector quantization. *Image and Video Compression Standards: Algorithms and Architectures, Second Edition* emphasizes the foundations of these standards, namely techniques such as predictive coding, transform-based coding such as the discrete cosine transform (DCT), motion estimation, motion compensation, and entropy coding, as well as how they are applied in the standards. The implementation details of each standard are avoided; however, the book provides all the material necessary to understand the workings of each of the compression standards, including information that can be used by the reader to evaluate the efficiency of various software and hardware implementations conforming to these standards. Particular emphasis is placed on those algorithms and architectures that have been found to be useful in practical software or hardware implementations. *Image and Video Compression Standards: Algorithms and Architectures, Second Edition* uniquely covers all major standards: JPEG, MPEG 1, MPEG 2, MPEG 4, H.261, H.263, in a simple and tutorial manner while fully addressing the architectural considerations involved when implementing these standards. As such, it serves as a valuable reference for the graduate student, researcher, or engineer. The book is also used frequently as a text for courses on the subject in both academic and professional settings.

Video Data Compression for Multimedia Computing (Hua Harry Li, Shan Sun, Haluk Derin, 2012-12-06) During the past few years, we have been witnessing the rapid growth of the applications of Interactive Digital Video, Multimedia Computing, Desktop Video, Teleconferencing, Virtual Reality, and High Definition Television (HDTV). An other information revolution which is tied to Cyberspace is almost within reach. The information data (text, graphics, video, sound, etc.) in the form of multimedia can be requested, accessed, distributed, and transmitted to potentially every household. This is changing and will continue to change the way of people doing business, functioning in the society, and entertaining. In the foreseeable future, many personalized, portable information terminals which can be carried while traveling will provide the link to central computer network to allow information exchange, including videos, from a node to node, from a center to a node, or nodes. Facing this opportunity, the question is: what are the major significant technical challenges that people have to solve to push the state of the art for the realization of the above-mentioned technology advancement? From our professional judgement, we feel that one of the major technical challenges is in Video Data Compression. Video communications in the form of desktop teleconferencing, videophone, network video delivery on demand, even games, are going to be major media traveling in the information superhighway, hopping from one node in the Cyberspace to the other.
