Stimulus Class Formation In Humans And Animals:

Stimulus Class Formation in Humans and Animals T.R. Zentall, P.M. Smeets, 1996-10-24 Stimulus class formation has been studied independently by two groups of researchers One group has come out of a learning theory approach while the second has developed out of a behavior analytic tradition The purpose of the present volume is to further establish the ties between these two research areas while allowing for differences in approach to the questions asked The book is loosely organized around four themes The first two sections deal with what constitutes functional and equivalence classes in animals and humans In the third section the authors attempt to identify stimulus control variables that contribute to the formation of equivalence classes The last section deals with the complex issue of the role of verbal behavior in equivalence classes The goal of the book is to provide the reader with a better understanding of the current state of research and theory in stimulus class formation It is also hoped that it will stimulate research into how and under what conditions stimulus classes can form

Primate Origins of Human Cognition and Behavior Tetsuro Matsuzawa, 2009-03-12 Biologists and anthropologists in Japan have played a crucial role in the development of primatology as a scientific discipline Publication of *Primate Origins of Human Cognition and Behavior* under the editorship of Tetsuro Matsuzawa reaffirms the pervasive and creative role played by the intellectual descendants of Kinji Imanishi and Junichiro Itani in the fields of behavioral ecology psychology and cognitive science Matsuzawa and his colleagues humans and other primate partners explore a broad range of issues including the phylogeny of perception and cognition the origin of human speech learning and memory recognition of self others and species society and social interaction and culture With data from field and laboratory studies of more than 90 primate species and of more than 50 years of long term research the intellectual breadth represented in this volume makes it a major contribution to comparative cognitive science and to current views on the origin of the mind and behavior of humans

The Evolution of Cognition Cecilia M. Heyes, Ludwig Huber, 2000 In the last decade evolutionary psychology has come to refer exclusively to research on human mentality and behavior motivated by a nativist interpretation of how evolution operates This book encompasses the behavior and mentality of nonhuman as well as human animals and a full range of evolutionary approaches Rather than a collection by and for the like minded it is a debate about how evolutionary processes have shaped cognition The debate is divided into five sections Orientations on the phylogenetic ecological and psychological comparative approaches to the evolution of cognition Categorization on how various animals parse their environments how they represent objects and events and the relations

among them Causality on whether and in what ways nonhuman animals represent cause and effect relationships
Consciousness on whether it makes sense to talk about the evolution of consciousness and whether the phenomenon can be investigated empirically in nonhuman animals and Culture on the cognitive requirements for nongenetic transmission of information and the evolutionary consequences of such cultural exchange Contributors Bernard Balleine Patrick Bateson Michael J Beran M E Bitterman Robert Boyd Nicola Clayton Juan Delius Anthony Dickinson Robin Dunbar D P Griffiths Bernd Heinrich Cecilia Heyes William A Hillix Ludwig Huber Nicholas Humphrey Masako Jitsumori Louis Lefebvre Nicholas Mackintosh Euan M Macphail Peter Richerson Duane M Rumbaugh Sara Shettleworth Martina Siemann Kim Sterelny Michael Tomasello Laura Weiser Alexandra Wells Carolyn Wilczynski David Sloan Wilson *Essential Behaviour Analysis* Julian Leslie, 2015-10-15 Since the so called cognitive revolution in psychology in the 1960s it has often been said that behaviourism is dead This book demonstrates why this is not the case and how the behavioural approach has continued to flourish Leslie begins by summarising the behavioural approach to psychology and shows how it differs from other contemporary and cognitive approaches The basic principles of the discipline are outlined and linked to major areas of interest and importance such as behavioural neuroscience resolution of human behavioural problems and human language and cognition Behaviour analysis is thus shown to contribute to our developing understanding of the relationship between brain systems and psychological problems to provide an effective and scientifically based approach to human behavioural problems and to deal with topics central to modern psychology Brain and Values Karl H. Pribram, 2018-01-17 This 5th volume of the Appalachian Conference discusses how the brain processes information the role of memory and value and models of creativity It pursues aspects of cognitive neuroscience and behavioral neurodynamics such as the topic of values and quantum distributed processing in the brain **Behavior Analyst**, 2003 **Handbook of Intelligence** Sam Goldstein, Dana Princiotta, Jack A. Naglieri, 2014-12-08 Numerous functions cognitive skills and behaviors are associated with intelligence yet decades of research has yielded little consensus on its definition Emerging from often conflicting studies is the provocative idea that intelligence evolved as an adaptation humans needed to keep up with and survive in challenging new environments The Handbook of Intelligence addresses a broad range of issues relating to our cognitive and linguistic past It is the first full length volume to place intelligence in an evolutionary cultural framework tracing the development of the human mind exploring differences between humans and other primates and addressing human thinking and reasoning about its own intelligence and its uses The works of pioneering thinkers from Plato to Darwin Binet to Piaget Luria to Wechsler are referenced to illustrate major events in the evolution of theories of intelligence leading to the current era of multiple intelligences and special education programs In addition it examines evolutionary concepts in areas as diverse as creativity culture neurocognition emotional intelligence and assessment Featured topics include The evolution of the human brain from matter to mind Social competition and the evolution of fluid intelligence Multiple intelligences in the new age of

thinking Intelligence as a malleable construct From traditional IQ to second generation intelligence tests The evolution of intelligence including implications for educational programming and policy The Handbook of Intelligence is an essential resource for researchers graduate students clinicians and professionals in developmental psychology assessment testing and evaluation language philosophy personality and social psychology sociology and developmental biology **Learning** David A. Lieberman,2000 This text shows how learning principles revealed in animal research can be applied to human behaviour Lieberman also reveals the relationship of learning to cognitive processes such as memory and thinking **Animal Behavior: Mechanisms, Ecology, Evolution** Lee C. Drickamer,Stephen H. Vessey,Elizabeth Jakob,2001-07-17 Designed for a one semester introductory course in Animal Behavior Animal behavior is a broad discipline with investigators and contributions from diverse perspectives including anthropology comparative psychology ecology ethology physiology and zoology The authors goal in this textbook is to use evolutionary principles as a unifying theme to provide students exposure to a number of approaches to the field of animal behavior They also demonstrate that the varied perspectives used to study behavior are complementary and often integrated they are not mutually exclusive The subtitle Mechanisms Ecology and Evolution reflects the broad themes that dominate the book Encyclopedia of Animal Behavior: A-C Marc Bekoff,2004 Entries examine a broad array of different species and behavior patterns using techniques that range from molecular approaches to the study of behavior to analyses of individuals populations species and ecosystems Language and Autism Adrienne Fitzer,Peter Sturmey,2009 This volume will provide the reader with a concise overview of applied behavioral interventions for language in people with autism spectrum disorders It is an edited work consisting of 12 chapters organized into two broad sections Part I deals with general aspects of language in people with ASD such as the nature of language impairments general approaches to language teaching behavioral conceptions of language and the evidence base for which approaches are effective Part II addresses specific programmatic issues including particular intervention questions such as how to teach specific functions e.g. mands tacts intraverbals and echoics specific intervention methods e.g. discrete trial training natural language paradigm and incidental teaching and intervening for problematic aspects of verbal behavior e.g. prosody and maladaptive verbal behavior **American Journal of Mental Retardation** ,2008 Includes the association's conference proceedings and addresses *Advances in Psychology* ,1998 **Handbook of Psychological Change** C.
