Words, Languages And Combinatorics - Proceedings Of The International Conference Masami Ito,1992-01-27

The topics included in this proceedings cover both mathematics and computer science They include Codes Free Monoids Transformation Semigroups Automata Formal Languages Word Problems Orders and Combinatorics Attention is paid to the algebraic theories of codes and rewriting systems which are the key subjects that combine these two fields The number of papers in the proceedings exceeds 45 and all papers have been refereed

Computer Algebra Handbook Johannes Grabmeier,Erich Kaltofen,Volker Weispfenning,2012-12-06 Two ideas lie gleaming on the jeweler s velvet The first is the calculus the second the algorithm The calculus and the rich body of mathematical analysis to which it gave rise made modern science possible but it has been the algorithm that has made possible the modern world David Berlinski The Advent of the Algorithm First there was the concept of integers then there were symbols for integers I II III 1111 fttt what might be called a sticks and stones representation I II III IV V Roman numerals 1 2 3 4 5 Arabic numerals etc Then there were other concepts with symbols for them and algorithms sometimes for manipulating the new symbols Then came collections of mathematical knowledge tables of mathematical computations theorems of general results Soon after algorithms came devices that provided assistance for carrying out computations Then mathematical knowledge was organized and structured into several related concepts and symbols logic algebra analysis topology algebraic geometry number theory combinatorics etc This organization and abstraction lead to new algorithms and new fields like universal algebra But always our symbol systems reflected and influenced our thinking our concepts and our algorithms

Synthesizing Synchronous Systems by Static Scheduling in Space-Time Björn Lisper,1989-05-10 The subject of this book is the synthesis of synchronous hardware The purpose is to provide a firm mathematical foundation for the so called space time mapping methods for hardware synthesis that have been proposed during the last few years Thus the treatment is fairly mathematical In a space time mapping method an algorithm is described as a set of atomic events with possible data dependencies between them The task is to find a mapping assigning a space time coordinate to each event so that causality is not violated and the solution is good Previous work in the area if it

provided any formalism at all has relied mainly on uniform recurrence equations extensions thereof or on purely graph theoretic formulations In this project algebra is used instead and the close connection with single assignment languages is stressed Thus it is possible to generalize previous work and to give simple characterizations of the type of algorithms that can be implemented with space time mappings The results presented can be applied to hardware construction and compiler techniques for parallel computers

Prototyping of Concurrent Control Systems Implemented in FPGA Devices

Remigiusz Wiśniewski, 2016-09-30 This book focuses on prototyping aspects of concurrent control systems and their further implementation and partial reconfiguration in programmable devices Further it lays out a full prototyping flow for concurrent control systems Based on a given primary specification a system is described with an interpreted Petri net which naturally reflects the concurrent and sequential relationships of the design The book shows that apart from the traditional option of static configuration of the entire system the latest programmable devices especially FPGAs offer far more sophistication Partial reconfiguration allows selected parts of the system to be replaced without having to reprogram the entire structure of the device Approaches to dynamic and static partial reconfiguration of concurrent control systems are presented and described in detail p The theoretical work is illustrated by examples drawn from various applications with a milling machine and a traffic light controller highlighted as representative interpreted Petri nets Given the ubiquity of concurrent control systems in a huge variety of technological areas including transportation medicine artificial intelligence manufacturing security and safety and planetary exploration the innovative software and hardware design methods described here will be of considerable interest to control engineers and systems and circuits researchers in many areas of industry and academia

Automated Technology for Verification and Analysis

Doron A. Peled, Yih-Kuen Tsay, 2005-09-19 The Automated Technology for Verification and Analysis ATVA international symposium series was initiated in 2003 responding to a growing interest in formal verification spurred by the booming IT industry particularly hardware design and manufacturing in East Asia Its purpose is to promote research on automated verification and analysis in the region by providing a forum for interaction between the regional and the international research industrial communities of the field ATVA 2005 the third of the ATVA series was held in Taipei Taiwan October 4-7 2005 The main theme of the symposium encompasses significant complexities tools and applications of automated methods for verification and analysis The symposium was co-located and had a two-day overlap with FORTE 2005 which was held October 2-5 2005 We received a total of 95 submissions from 17 countries Each submission was assigned to three Program Committee members who were helped by their subreviewers for rigorous and fair evaluation The final deliberation by the Program Committee was conducted over email for a duration of about 10 days after nearly all review reports had been collected In the end 33 papers were selected for inclusion in the program ATVA 2005 had three keynote speeches given respectively by Amir Pnueli joint with FORTE 2005 Zohar Manna and Wolfgang Thomas The main symposium was preceded by a tutorial day consisting of three two-hour lectures given also by the keynote

speakers Tools and Algorithms for the Construction and Analysis of Systems ,2004 **Proceedings of the ... Annual ACM Symposium on Principles of Distributed Computing** ,2001 Notes on Set Theory Josep Díaz,1989 The axiomatic theory of sets is a vibrant part of pure mathematics with its own basic notions fundamental results and deep open problems It is also viewed as a foundation of mathematics so that to make a notion precise simply means to define it in set theory This book gives a solid introduction to pure set theory through transfinite recursion and the construction of the cumulative hierarchy of sets and also attempts to explain how mathematical objects can be faithfully modeled within the universe of sets In this new edition the author has added solutions to the exercises and rearranged and reworked the text to improve the presentation **Proceedings of the Twentieth Annual ACM Symposium on Principles of Distributed Computing** ,2001 **Resolution of Equations in Algebraic Structures: Algebraic techniques** Hassan Ait-Kaci,M. Dittrich,1988 This volume collects papers presented at the 2nd International Workshop on Object Oriented Database Systems ooDBS II held at the Eberburg near Bad M nster am Stein FRG in September 1988 It thus gives a comprehensive overview of the latest developments in this flourishing area of current database research Object oriented database systems have been approached with mainly two major intentions in mind namely to better support new application areas like CAD CAM office automation knowledge engineering and to overcome the impedance mismatch between data models and programming languages The notion of object orientation in database systems is thus a broader one than e g in the area of programming languages Structural object orientation provides for data model mechanisms that allow the direct representation and manipulation of highly structured entities behavioral object orientation cares for facilities to associate arbitrary user defined type specific operations with data entities finally full object orientation tries to combine the advantages of both categories Though data model concepts are the decisive feature of object oriented database systems numerous other system aspects have to be reconsidered or allow better solutions respectively in this light They include e g transactions implementation

techniques optimization formalization the inclusion of rules and the integration with other systems A number of research prototypes and even some commercial systems are meanwhile available Both approaches to extend databases with object oriented capabilities and approaches to extend object oriented programming languages with database features have been and are being investigated
