Author Gilbert Held uses his experience in constructing, configuring and operating a number of Web-based Windows NT servers that receive millions of hits per week to explain to networking professionals how to test and troubleshoot computer problems. This book focuses on three critical Microsoft Windows NT server areas: the server itself, the local area network and the wide area network. The first section of the book provides information detailing the basics of the server, how to examine its operation and a number of techniques to boost the productivity of operating an NT system. Beginning with an overview of Ethernet and TCP/IP, chapters in the second section cover the operation of Microsoft's Network Monitor, Tricom's EtherVision and Cinco Systems WebXRay. In the third section, the focus is placed upon the wide area network used to interconnect LANs. Chapters in this section introduce the reader to basic transmission measurements, channel and circuit parameters and other topics necessary to understand how to test and troubleshoot the WAN connection. **American Book Publishing Record**, 2001. **Developer's Guide to Delphi**
