Strict Rules:

Computable Models of the Law Giovanni Sartor, Núria Casellas, Rossella Rubino, 2008-10-02 Information technology has now pervaded the legal sector and the very modern concepts of e law and e justice show that automation processes are ubiquitous European policies on transparency and information society in particular require the use of technology and its steady improvement Some of the revised papers presented in this book originate from a workshop held at the European University Institute of Florence Italy in December 2006 The workshop was devoted to the discussion of the different ways of understanding and explaining contemporary law for the purpose of building computable models of it especially models enabling the development of computer applications for the legal domain During the course of the following year several new contributions provided by a number of ongoing or recently finished European projects on computation and law were received discussed and reviewed to complete the survey This book presents 20 thoroughly refereed revised papers on the hot topics under research in different EU projects legislative XML legal ontologies semantic web search and meta search engines web services system architecture dialectic systems dialogue games multi agent systems MAS legal argumentation legal reasoning e justice and online dispute resolution The papers are organized in topical sections on knowledge representation ontologies and XML legislative drafting knowledge representation legal ontologies and information retrieval argumentation and legal reasoning normative and multi agent systems and online dispute resolution

ECAI 2014 T. Schaub, G. Friedrich, B. O'Sullivan, 2014-08 The role of artificial intelligence AI applications in fields as diverse as medicine economics linguistics logical analysis and industry continues to grow in scope and importance AI has become integral to the effective functioning of much of the technical infrastructure we all now take for granted as part of our daily lives This book presents the papers from the 21st biennial European Conference on Artificial Intelligence ECAI 2014 held in Prague Czech Republic in August 2014 The ECAI conference remains Europe's principal opportunity for researchers and practitioners of Artificial Intelligence to gather and to discuss the latest trends and challenges in all subfields of AI as well as to demonstrate innovative applications and uses of advanced AI technology Included here are the 158 long papers and 94 short papers selected for presentation at the conference Many of the papers cover the fields of knowledge representation reasoning and logic as well as agent based and multi agent systems machine learning and data mining The proceedings of PAIS 2014 and the PAIS System Demonstrations are also included in this volume which will be of interest to all those wishing to keep abreast of the latest developments in the field of AI

Logical Models of Legal Argumentation H. Prakken, Giovanni Sartor, 2012-12-06 In the study of forms of legal reasoning logic and argumentation theory long followed separate tracks Legal logicians tended to focus on a deductive reconstruction of justifying a decision disregarding the dialectical process leading to the chosen justification Others instead emphasized the adversarial and discretionary nature of legal reasoning involving reasonable evaluation of alternative choices and the use of analogical reasoning Recently however developments in Artificial Intelligence

and Law have paved the way for overcoming this separation Logic has widened its scope to defensible argumentation and informal accounts of analogy and dialectics have inspired the construction of computer programs Thus the prospect is emerging of an integrated logical and dialectical account of legal argument adding to the understanding of legal reasoning and providing a formal basis for computer tools that assist and mediate legal debates while leaving room for human initiative This book presents contributions to this development From a logical point of view it covers topics such as evaluating conflicting arguments weighing reasons modelling legal disputes as a dialogue game the role of the burden of proof the relation between principles rules reasons and facts and the relation between deductive and nondeductive arguments Written by leading scholars in the field and building on recent developments in logic and Artificial Intelligence the chapters provide a state of the art account of research on the logical aspects of legal argument

Law, Economics, and Game Theory John Cirace, 2020-07-06 This book considers three relationships law and economics economics and game theory and game theory and law Economists teach lawyers that economic principles cut across and integrate seemingly different legal subjects such as contracts torts and property Correspondingly lawyers teach economists that legal rationality is a separate and distinct decision making process that can be formalized by behavioral rules that are parallel to and comparable with the behavioral rules of economic rationality that efficiency often must be constrained by legal goals such as equal protection of the laws due process and horizontal and distributional equity and that the general case methodology of economics vs the hard case methodology of law for determining the truth or falsity of economic theories and theorems sometimes conflict Economics and Game Theory Law and economics books focus on economic analysis of judges decisions in common law cases and have been mostly limited to contracts torts property criminal law and suit and settlement There is usually no discussion of the many areas of law that require cooperative action such as is needed to provide economic infrastructure control public bad type externalities and make legislation Game theory provides the bridge between competitive markets and the missing discussion of cooperative action in law and economics How Competitive markets are examples subset of the Prisoners Dilemma which explains the conflict between individual self interested behavior and cooperation both in economic markets and in legislative bodies and demonstrates the need for social infrastructure and regulation of pollution and global warming Game Theory and Law Lawsuits usually involve litigation between two parties not the myriad participants in markets so the assumption of self interest constrained by markets does not carry over to legal disputes involving one on one bargaining in which the law gives one party superior bargaining power Game theory models predict the effect of different legal institutions rights and rules on the outcome of such bargaining Game theory also has a natural four model framework which is used in this book to analyze the law and economics of civil obligation which consists of torts negligence contracts and unjust enrichment
