Sun Dust:

Sundust Brendan O'Connell,2009-12 Tackling Tough Texts Sarah M. Lupo,Dan Reynolds,Christine Hardigree,2024-11-20 Filling a crucial need this book provides concrete ways to support all students in grades 6 12 as they engage with rigorous grade level texts in English language arts science and social studies The authors offer fresh insights into adolescent reading and what makes a given text tough including knowledge demands text structure and complexity vocabulary and more Research based step by step strategies are presented for explicitly scaffolding these challenges in the context of purposeful learning activities that leverage students individual strengths and interests The book includes planning tips text selection guidelines sample text sets and vivid case studies from culturally and linguistically diverse classrooms Fourteen reproducible forms and handouts can be photocopied or downloaded for use with students *From the sun's energy source to the formation of the solar system* Dan Bar-Zohar,2006-12-04 The latest observation of hundreds of exoplanets and the discovery of supermassive black hole at the center of many galaxies set the foundation for the theory presented in this book The theory suggest that the sun and stars energy source is not from fusion but instead from magnetic fields spreads in the galaxy by the supermassive black hole at the center of every galaxy This idea changes every aspect of astronomy and cosmology The big bang is no longer necessary to explain the source of the mass in the universe and the expansion of the universe According to this theory the matter in the universe is created in the cores of stars by conversion of energy to mass The expansion of the universe is induced by the rapid formation of new galaxies Stars grow slowly and gradually over tens of billion of years by conversion of energy to mass The gradual growth of stars and the planet search programs that found hundreds of nearby planets indicate that stars are born from planets This invalidates the solar nebula hypothesis as the source of the stars and the solar system Stars fluctuate from a main sequence state to a red giant state They stay in the main sequence when they receive strong magnetic fields and they turn into a red giant when the magnetic fields are weakened The sun also fluctuated from a main sequence to a red giant When the sun was a red giant it had strong solar wind that supplied the material to created the planets The solar system contains hard evidence that the sun was a red giant those are short lived isotopes and chondrules The fact that there is hard evidenced to a red giant sun confirm this theory Highlights of this theory include the following 1 The sun energy source is from magnetic fields from the galactic center 2 The heat induced by the magnetic fields leads to high energy collision between particle in the sun core that creates new particle and increase the sun mass 3 All the stars in the galaxy create new mass so the total mass and the size of the galaxy is increasing 4 The stars in the galaxy eject dust that freefall to the galactic center supermassive black hole Thorough the dynamo effect the gravitational potential energy of the debris and dust is converted to magnetic fields 5 As the galaxy mass and size increase globular clusters are detached form the main galaxy to create new galaxies 6 Galaxies spawn new galaxies and the total number of galaxies in the universe increase 7 The universe expands and accelerates from the increase

in the number of the galaxies 8 The Big Bang cosmological model is replaced by a new cosmological model that resembles the steady state theory 9 Stars grow gradually from conversion of energy to mass 10 Stars are born from planets they first grow by accretion and then by conversion of energy to mass 11 Stars fluctuate from main sequence to a red giant When the magnetic fields are strong the star is in the main sequence when the magnetic fields are weakened the star turn to a red giant 12 The sun was a red giant 4 6 billions years ago 13 The planets were created from the strong solar wind of the red giant sun
