Selected Topics On The General Properties Of Quantum Field Theory: Lecture Notes Franco Strocchi,1993-11-30 This book provides a readable account of the foundations of QFT in particular of the Euclidean formulation with emphasis on the interplay between physical requirements and mathematical structures The general structures underlying the conventional local renormalizable formulation of gauge QFT are discussed also on the basis of simple models The mechanism of confinement non trivial topology and vacua chiral symmetry breaking and solution of the U 1 problem are clarified through a careful analysis of the Schwinger model which settles unclear or debated points

Proceedings of the Summer Seminar, Boulder, Colorado, 1960: The general theory of quantized fields, by R. Jost Mark Kac,1965 The General Theory of Relativity Anadijiban Das,Andrew DeBenedictis,2012-06-26 The General Theory of Relativity A Mathematical Exposition will serve readers as a modern mathematical introduction to the general theory of relativity Throughout the book examples worked out problems and exercises with hints and solutions are furnished Topics in this book include but are not limited to tensor analysis the special theory of relativity the general theory of relativity and Einstein s field equations spherically symmetric solutions and experimental confirmations static and stationary space time domains black holes cosmological models algebraic classifications and the Newman Penrose equations the coupled Einstein Maxwell Klein Gordon equations appendices covering mathematical supplements and special topics Mathematical rigor yet very clear presentation of the topics make this book a unique text for both university students and research scholars Anadijiban Das has taught courses on Relativity Theory at The University College of Dublin Ireland Jadavpur University India Carnegie Mellon University USA and Simon Fraser University Canada His major areas of research include among diverse topics the mathematical aspects of general relativity theory Andrew DeBenedictis has taught courses in Theoretical Physics at Simon Fraser University Canada and is also a member of The Pacific Institute for the Mathematical Sciences His research interests include quantum gravity classical gravity and semi classical gravity

Peter Breitenlohner, 2000-10-04 On the occasion of W Zimmermann's 70th birthday some eminent scientists gave review talks in honor of one of the great masters of quantum field theory It was decided to write them up and publish them in this book together with reprints of some seminal papers of the laureate Thus this volume deepens our understanding of anomalies algebraic renormalization theory axiomatic field theory and of much more while illuminating the past and present state of affairs and pointing to interesting problems for future research
