*Cities in the Anthropocene* Ihnji Jon, 2021-07-20 Climate change is real and extreme weather events are its physical manifestations. These extreme events affect how we live and work in cities and subsequently the way we design, plan and govern them. Taking action for the environment is not only a moral imperative; instead, it is activated by our everyday experience in the city. Based on the author's site visits and interviews in Darwin, Australia; Tulsa, Oklahoma; Cleveland, Ohio; and Cape Town, South Africa, this book tells the story of how cities can lead a transformative pro-environment politics. National governments often fail to make binding agreements that bring about radical actions for the environment. This book shows how cities, as local sites of mobilizing a collective political agenda, can be frontiers for activating the kind of environmental politics that appreciates the role of nature in the everyday functioning of our urban life. **Advanced Control Engineering Methods in Electrical Engineering Systems** Mohammed Chadli, Sofiane Bououden, Salim Ziani, Ivan Zelinka, 2018-09-10 This book presents the proceedings of the Third International Conference on Electrical Engineering and Control (ICEECA2017). It covers new control system models and troubleshooting tips and also addresses complex system requirements such as increased speed, precision, and remote capabilities, bridging the gap between the complex math-heavy controls theory taught in formal courses and the efficient implementation required in real-world industry settings. Further, it considers both the engineering aspects of signal processing and the practical issues in the broad field of information transmission and novel technologies for communication networks and modern antenna design. This book is intended for researchers, engineers, and advanced postgraduate students in control and electrical engineering, computer science, signal processing, as well as mechanical and chemical engineering. United States Code United States, 2006 **The Role of Local Benefits in Global Environmental Programs**, 2006 This study analyzes the interrelationship between local benefits and global environment benefits in the Global Environment Facility (GEF) strategies and projects in order to enhance GEF policies, strategies, and project design and implementation so these can effectively promote the potential for local gains in those global environmental programs where actors need to be mobilized for long-term support of sound environmental management. Costs incurred by local communities for supplying global environmental goods need to be reduced, and possible negative impacts need to be ameliorated. Strengthen GEF monitoring and evaluation policies and processes to develop indicators for and enhance the tracking of local benefits and negative impacts. Expand the body of existing operational knowledge of good practices and experiences germane to pursuing global environmental issues and of constraints or fallacies to be avoided in operations. Disseminate widely the most valuable lessons of existing experience and show how these lessons can be implemented in future GEF operations. **CMR**, 2020 Archival snapshot of entire looseleaf Code of Massachusetts Regulations held by the Social Law Library of Massachusetts as of January 2020 **The Renewal of Nuclear Power in Finland** M.
