Cloud and Internet Computing held on November 8 10 2017 in Barcelona Spain These computing technologies have rapidly  
established themselves as breakthrough paradigms for solving complex problems by enabling the aggregation and sharing of  
an increasing variety of distributed computational resources at large scale Grid Computing originated as a paradigm for high  
performance computing offering an alternative to expensive supercomputers through different forms of large scale  
distributed computing while P2P Computing emerged as a new paradigm after client server and web based computing and  
has shown to be useful in the development of social networking B2B Business to Business B2C Business to Consumer B2G  
Business to Government B2E Business to Employee and so on Cloud Computing has been defined as a computing paradigm  
where the boundaries of computing are determined by economic rationale rather than technical limits Cloud computing has  
quickly been adopted in a broad range of application domains and provides utility computing at large scale Lastly Internet  
Computing is the basis of any large scale distributed computing paradigm it has very rapidly developed into a flourishing  
field with an enormous impact on today s information societies serving as a universal platform comprising a large variety of  
computing forms such as Grid P2P Cloud and Mobile computing The aim of the book *Advances on P2P Parallel Grid Cloud  
and Internet Computing* is to provide the latest findings methods and development techniques from both theoretical and  
practical perspectives and to reveal synergies between these large scale computing paradigms **XII Mediterranean**

**Conference on Medical and Biological Engineering and Computing 2010** Nicolas Pallikarakis, Panagiotis D.

Bamidis, 2010-05-28 Over the past three decades the exploding number of new technologies and applications introduced in medical practice often powered by advances in biosignal processing and biomedical imaging created an amazing account of new possibilities for diagnosis and therapy but also raised major questions of appropriateness and safety. The accelerated development in this field alongside with the promotion of electronic health care solutions is often on the basis of an uncontrolled diffusion and use of medical technology. The emergence and use of medical devices is multiplied rapidly and today there exist more than one million different products available on the world market. Despite the fact that the rising cost of health care partly resulting from the new emerging technological applications forms the most serious and urgent problem for many governments today, another important concern is that of patient safety and user protection issues that should never be compromised and expelled from the Biomedical Engineering research practice agenda.
