**Sunflower Science and Technology** Jack F. Carter,1978      Sunflower Science and Technology Jack F. Carter,1978

This monograph offers a concise review of the latest findings in sunflower for researchers throughout the world Sunflower Production and Technology offers an extensive revision from the previous monograph Significant progress has been made since 1978 in the areas of applied and basic sunflower research Biotechnology is covered in the new monograph The new monograph contains four more chapters than the previous edition      Sunflower Science and Technology Number 19 in the Sevier Agronomy Carter Jack F.,1978      **Developments in Oils and Fats** R. J. Hamilton,2012-12-06 This first volume in a series is intended to provide up to date information on specific topics in oils and fats The book will be especially valuable for any practising scientist or technologist who deals in any way with oils and fats whether from a nutritional surfactant cosmetic or analytical chemistry point of view In addition there is sufficient depth in most of the articles to catch the imagination of many more senior managers in the industry The oils and fats industry is closely aligned with the food industry and it is no surprise to find that five of the chapters 1 2 3 6 and 7 are written from a food perspective The current arguments about diets and their fat content are well developed in Dr Enser s chapter on meat lipids He has presented a very balanced picture explaining that there are many reports which contradict the fashionable saturated fatty acids are bad theory This chapter will do much to illustrate the dietary implications of meat lipids and should stimulate discussion and further research

**Genetic Improvement of Field Crops** Gustavo A. Slafer,2021-04-29 Outlining successful breeding techniques to augment the yields of the world s major crops this reference analyzes the physiological and genetic basis for past and potential future increases in crop yields Covering crops with wide differences in morphology photosynthetic rates and nitrogen metabolisms Genetic Improvement of Field Crops investigates the changes produced by breeders in the physiological attributes affecting wheat grain yield and nitrogen content during the last century discusses those crop characteristics of oats that have already been altered or might be manipulated through breeding to further increase yield potential describes several genetic factors responsible for both yield potential and stress resistance in barley offers insights into the relationship between increases in the yield potential and stress tolerance of corn examines the evolution of sunflower crop yields and yield stability and estimates the contribution of improved cultivars evaluates the effects of breeding on tuber characteristics related to the crop growth and yield of the potato elucidates the possibilities for simultaneous improvement of yield and fiber strength in cotton and identifies the features to be considered in the development of high yielding varieties of rice for different agricultural systems Providing nearly 1600 key literature citations allowing further in depth study of particular topics Genetic Improvement of Field Crops is for plant physiologists and breeders crop and agricultural scientists agronomists biochemists geneticists biotechnologists microbiologists and upper level undergraduate and graduate students in these disciplines      *The Cambridge World History of Food* Kenneth F.
