The Symbiotic Planet Lynn Margulis, 1998 Lynn Margulis is an ardent supporter of the Gaia hypothesis the idea that due to the finely balanced interdependence of all life forms the planet functions as a single giant cell She argues that no organism is an island and that all are linked to each other Written with tremendous zest and authority *The Symbiotic Planet* traces the evolution of Earth from the origins of life and sex to the emergence of hyperseas and an eerie future she describes for humanity

Evolution "On Purpose" Peter A. Corning, Stuart A. Kauffman, Denis Noble, James A. Shapiro, Richard I. Vane-Wright, 2023-08-22 A unique exploration of teleonomy also known as evolved purposiveness as a major influence in evolution by a broad range of specialists in biology and the philosophy of science The evolved purposiveness of living systems termed teleonomy by chronobiologist Colin Pittendrigh has been both a major outcome and causal factor in the history of life on Earth Many theorists have appreciated this over the years going back to Lamarck and even Darwin in the nineteenth century In the mid twentieth century however the complex dynamic process of evolution was simplified into the one way bottom up single gene centered paradigm widely known as the modern synthesis In *Evolution On Purpose* edited by Peter A Corning Stuart A Kauffman Denis Noble James A Shapiro Richard I Vane Wright and Addy Pross some twenty theorists attempt to modify this reductive approach by exploring in depth the different ways in which living systems have themselves shaped the course of evolution *Evolution On Purpose* puts forward a more inclusive theoretical synthesis that goes far beyond the underlying principles and assumptions of the modern synthesis to accommodate work since the 1950s in molecular genetics developmental biology epigenetic inheritance genomics multilevel selection niche construction physiology behavior biosemiotics chemical reaction theory and other fields In the view of the authors active biological processes are responsible for the direction and the rate of evolution Essays in this collection grapple with topics from the two way read write genome to cognition and decision making in plants to the niche construction activities of many organisms to the self making evolution of humankind As this collection compellingly shows and as bacterial geneticist James Shapiro emphasizes The capacity of living organisms to alter their own heredity is undeniable [The Lost Language of Plants](#) Stephen Harrod Buhner, 2002-03-06 Enraged Energized Exultant You won t know how to feel after reading Stephen Harrod Buhner s *The Lost Language of Plants*

This is a devastating expose about how we are polluting our environment with the pharmaceuticals that Western medicine has developed to heal us. We are ingesting Prozac, Premarin, and antibiotics whether we want to or not. Yet as we foul air and water with toxic residues, we overlook the power of the planet's natural healers, stabilizers, and chemists: plants. Buhner sees plants as fully sentient beings, adjusting and fine-tuning to the environment just as they have done for the past 500 million years. Until recently, humans shared the language of plants, but increasingly, we have lost our ability to communicate with the natural world. Buhner shows us a path back to our shamanic roots.

Evolution Donald R. Prothero, 2007-11-06. Over the past twenty years, paleontologists have made tremendous fossil discoveries, including fossils that mark the growth of whales, manatees, and seals from land mammals and the origins of elephants, horses, and rhinos. Today, there exists an amazing diversity of fossil humans, suggesting we walked upright long before we acquired large brains, and new evidence from molecules that enable scientists to decipher the tree of life as never before. The fossil record is now one of the strongest lines of evidence for evolution. In this engaging and richly illustrated book, Donald R. Prothero weaves an entertaining though intellectually rigorous history out of the transitional forms and series that dot the fossil record. Beginning with a brief discussion of the nature of science and the monkey business of creationism, Prothero tackles subjects ranging from flood geology and rock dating to neo-Darwinism and macroevolution. He covers the ingredients of the primordial soup, the effects of communal living, invertebrate transitions, the development of the backbone, the reign of the dinosaurs, the mammalian explosion, and the leap from chimpanzee to human. Prothero pays particular attention to the recent discovery of missing links that complete the fossil timeline and details the debate between biologists over the mechanisms driving the evolutionary process. Evolution is an absorbing combination of firsthand

observation scientific discovery and trenchant analysis With the teaching of evolution still an issue there couldn't be a better moment for a book clarifying the nature and value of fossil evidence Widely recognized as a leading expert in his field Prothero demonstrates that the transformation of life on this planet is far more awe inspiring than the narrow view of extremists

Aquagenesis Richard Ellis, 2001 Ellis's detailed drawings bring animals to life that have not been seen for 400 million years some that rival science fiction monsters for sheer weirdness Early crocodiles and turtles were three times larger than they are today and there was once a manatee that was 30 feet long and had no bones below the elbow There

were the trilobites jointed animals with complex eyes that dominated the seas for 200 million years and then completely disappeared sharks with teeth on their backs and others 50 feet long with teeth the size of your hand Fifty million years ago some land dwelling mammals reentered the water and began the process of modification that turned them into whales It was the most astonishing transformation in mammalian history In Aquagenesis you will track these changes and meet the paleontologists who have found the links between the terrestrial mammals and the first semiaquatic whales creatures that probably looked like hyenas huge shrews or fat otters Today the only animal on earth that regularly walk in an upright two legged stance are penguins and people It is possible that our size shape stride intelligence and hair or lack thereof can also be explained by the provocative theory of the aquatic ape
