## **The Child's Conception Of:**

*The Child's Conception of the World* Jean Piaget, 2007 Nineteenth century developmental psychologist Jean Piaget examines the child's notions of reality and causality at various stages of development

**Child's Conception of Number** Jean Piaget, 2013-07-04 First published in 1997 This is Volume II of selected works of Jean Piaget which looks at his thinking on children and how their interaction and perception of number touching on the areas of development in thinking on conversation of quantities and invariance of wholes cardinal and ordinal one one correspondence as well as additive and multiplicative compositions These explorations look into tracing the development of the operations which give rise to number and continuous quantities to space time speed etc operations which in these essential fields lead from intuitive and egocentric pre logic to rational coordination that is both deductive and inductive

*The Child's Conception of the World* Jean Piaget, 1964 First Published in 1997 Routledge is an imprint of Taylor Francis an informal company

*Child's Conception of Space* Jean Piaget, 2013-08-21 First published in 1997 This Volume 4 of Jean Piaget's selected works and explores the study of the concept of space or rather of the innumerable ideas involved in the concept of space which Piaget sees is for many reasons an indispensable part of child psychology

*The Child's Conception of Number* Jean Piaget, 1952 Professor Piaget discusses a set of investigations he and a team of co workers carried out on the genesis of the notion of number in the child's mind By asking questions freely they were able to gather valuable statements from children about the actions they were asked to perform with experimental objects Beginning with the hypothesis that the construction of number goes hand in hand with the development of logic the research team set out to diagnose developing number relevant capabilities more basic than those involved in counting and routine primary school number work The aim was to study the essential properties of the number system and the underlying assumptions which adults make about the behavior of numbers The first experiments dealt with the child's ability to grasp the ideas of conservation of quantity and conservation of number These led to investigations on the ability to coordinate corresponding sets and a study of the cardinal and ordinal aspects of numbers and their interrelationships The final experiments dealt with the child's growing awareness of basic additive and multiplicative properties of numbers Piaget sees classes relations and numbers as cognitive domains which develop in an intertwined mutually dependent way From these experiments he concludes that number is organized stage after stage in close connection with the gradual elaboration of systems of inclusions hierarchy of logical classes and systems of asymmetrical relations qualitative serializations the sequence of numbers thus resulting from an operational synthesis of classification and seriation

*Child's Conception of Movement and Speed* Jean Piaget, 2013-04-15 This book was first published in 1970

*The Child's Conception of Space* Jean Piaget, 1997

*The Child's Conception of Time* Jean Piaget, 2013-04-15 This book was first published in 1969

**The Child's Conception of Space** Jean Piaget, 1948

*The Child's Conception of the World* Jean Piaget, 2024-03-19 A milestone of child psychology The Child's Conception of the World

explores the ways in which the reasoning powers of young children differ from those of adults What conceptions of the world does the child naturally form at the different stages of its development To what extent does the child distinguish the external world from an internal or subjective world and what limits does he or she draw between the self and objective reality These questions make up the first problem the child's notion of reality A second fundamental problem is the significance of explanations put forward by the child What use does he or she make of the notions of cause and law Is the form of explanation presented by the child a new type These and like questions form the second problem the child's notion of causality Jacques Voneche Director of the Piaget Archives in Geneva Switzerland provides a preface to this classic in which he reveals the provenance of *The Child's Conception of the World* within the context of Piaget's other work and the then burgeoning field of developmental psychology

**The Child's Conception of Number**, 1969 **The Child's Conception of the World (Classic Reprint)** Jean Piaget, 2017-05-18 Excerpt from *The Child's Conception of the World* Hence it is not merely useful but essential first to examine the methods to be employed in studying these beliefs To judge of the logic of children it is often enough simply to talk with them or to observe them among themselves To arrive at their beliefs requires a special method which it must be confessed outright is not only difficult and tedious but demands also an outlook the fruit of at least one or two full years training Mental specialists trained in clinical practice will immediately appreciate the reason In order to assess a child's statement at its true worth the most minute precautions are necessary Some account of these precautions must now be given since if the reader ignores them he is likely to falsify completely the meaning of the pages which follow and moreover to mismanage the experiments should he as we hope decide to check them by repeating them himself About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at [www.forgottenbooks.com](http://www.forgottenbooks.com) This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

**The Child's Conception of Space** Jean Piaget, Bärbel Inhelder, 2013 *An Introduction to "The Child's Conception of Geometry"* G. E. T. Holloway, 1967 *The Child's Conception of the World... Transl....* Jean Piaget, 1967 *The Child's Conception of Geometry* Jean Piaget, Bärbel Inhelder, Alina Szeminska, 1960

[The Child's Conception of Physical Causality](#) Jean Piaget, 2017-11-30 Our encounters with the physical world are filled with miraculous puzzles wind appears from somewhere heavy objects like oil tankers float on oceans yet smaller objects go to the bottom of our water filled buckets As adults instead of confronting a whole world we are reduced to driving from one parking garage to another *The Child's Conception of Physical Causality* part of the very beginning of the ground breaking work of the Swiss naturalist Jean Piaget is filled with creative experimental ideas for probing the most sophisticated ways of

thinking in children The strength of Piaget s research is evident in this collection of empirical data systematically organized by tasks that illuminate how things work Piaget s data are remarkably rich In his new introduction Jaan Valsiner observes that Piaget had no grand theoretical aims yet the book s simple power cannot be ignored Piaget s great contribution to developmental psychology was his clinical method a tactic that integrated relevant aspects of naturalistic experiment interview and observation Through this systematic inquiry we gain insight into children s thinking Reading Piaget will encourage the contemporary reader to think about the unity of psychological phenomena and their theoretical underpinnings His wealth of creative experimental ideas probes into the most sophisticated ways of thinking in children Technologies change yet the creative curiosity of children remains basically unhindered by the consumer society Piaget s data preserve the reality of the original phenomena As such this work will provide a wealth of information for developmental psychologists and those involved in the field of experimental science
