## **The Child's Conception Of Number:**

The Child's Conception of Number Jean Piaget, 1997 First published in 1997 Routledge is an imprint of Taylor Francis an informa company

**The Child's Conception of Number** Jean Piaget, 1952 Professor Piaget discusses a set of investigations he and a team of co workers carried out on the genesis of the notion of number in the child's mind By asking questions freely they were able to gather valuable statements from children about the actions they were asked to perform with experimental objects Beginning with the hypothesis that the construction of number goes hand in hand with the development of logic the research team set out to diagnose developing number relevant capabilities more basic than those involved in counting and routine primary school number work The aim was to study the essential properties of the number system and the underlying assumptions which adults make about the behavior of numbers The first experiments dealt with the child's ability to grasp the ideas of conservation of quantity and conservation of number These led to investigations on the ability to coordinate corresponding sets and a study of the cardinal and ordinal aspects of numbers and their interrelationships The final experiments dealt with the child's growing awareness of basic additive and multiplicative properties of numbers Piaget sees classes relations and numbers as cognitive domains which develop in an intertwined mutually dependent way From these experiments he concludes that number is organized stage after stage in close connection with the gradual elaboration of systems of inclusions hierarchy of logical classes and systems of asymmetrical relations qualitative seriations the sequence of numbers thus resulting from an operational synthesis of classification and seriation

The Child's Conception of Number Jean Piaget, 2003-01 The Child's Conception of Number, 1969 Child's Conception of Number Jean Piaget, C. Gattegno, F.M. Hodgson, 2013-07-04 First published in 1997 This is Volume II of selected works of Jean Piaget which looks at his thinking on children and how their interaction and perception of number touching on the areas of development in thinking on conversation of quantities and invariance of wholes cardinal and ordinal one-one correspondence as well as additive and multicatitive compositions These explorations look into tracing the development of the operations which give rise to number and continuous quantities to space time speed etc operations which in these essential fields lead from intuitive and egocentric pre logic to rational co ordination that is both deductive and inductive

References Index Reviews of this book

The publication of this book may mark a sea change in the way that we think about cognitive development For the past two decades the emphasis has been on young children's limitations Now a new trend is emerging to challenge the original assumption of young children's cognitive incapacity

*The Child's Understanding of Number* represents the most original and provocative manifestation to date of this new trend

Contemporary Psychology Reviews of this book Here at last is the book we have been waiting for or at any rate known we needed on the young child and number The authors are at once sophisticated in their own understanding of number and rich in psychological intuition They present a wealth of good experiments to support and guide their intuitions And all is told in so simple and unalarming a manner that even the most pusillanimous will be able to read with enjoyment

Canadian Journal of Psychology

*The Child's Conception of Learning* Ingrid Pramling, Ingrid Pramling Samuelsson, 1983 The main purpose of this study was to trace the development of children's awareness that they can learn and to describe the forms of their ideas of learning A complementary aim was to account for the extent to which such conceptions can be found at different levels of development The investigation consisted of two observational studies and a series of six interview studies with 300 Swedish children ranging from 3 to 8 years of age The child's idea of learning was dealt with in terms of what is learned and how

Concerning what is learned findings suggest a developmental progression from learning to do to know and to understand findings also indicate a corresponding set of answers to the questions of how

Developmental differences were found in children's awareness of different forms in which one can learn It is concluded that preschool education to a large extent relies on conceptions which most children of preschool age lack

Appended are coding criteria interview questions and descriptions of related age trends and the child's conceptions of to be able to know to understand changes in thinking to find out by thinking and of what it takes to learn a phone number
