Tropical Pacific:

The Geography, Nature and History of the Tropical Pacific and its Islands Walter M. Goldberg, 2017-12-08 This volume provides an accessible scientific introduction to the historical geography of Tropical Pacific Islands assessing the environmental and cultural changes they have undergone and how they are affected currently by these shifts and alterations. The book emphasizes the roles of plants, animals, people, and the environment in shaping the tropical Pacific through a cross-disciplinary approach involving history, geography, biology, environmental science, and anthropology. With these diverse scientific perspectives, the eight chapters of the book provide a comprehensive overview of Tropical Pacific Islands from their initial colonization by native peoples to their occupation by colonial powers and the contemporary changes that have affected the natural history and social fabric of these islands. The Tropical Pacific Islands are introduced by a description of their geological formation, development, and geography. From there, the book details the origins of the islands' original peoples and the dawn of the political economy of these islands, including the domestication and trade of plants, animals, and other natural resources. Next, readers will learn about the impact of missionaries on Pacific Islands and the effects of World War II and nuclear testing on natural resources and the health of its people. The final chapter discusses the islands in the context of natural resource extraction, population increases, and global climate change. Working together, these factors are shown to affect rainfall and limited water resources, as well as the ability to sustain traditional crops and the capacity of the islands to accommodate its residents.

Tropical Pacific Island Environments Christopher S. Lobban, Maria Scheffter, 1997 Discusses the ecosystems of the islands of Oceania. Important themes in the book are the connection of ecological principles with local issues and experience, issues of sustainability, the validation of traditional knowledge, and examination of the ways in which scientists develop hypotheses and theories about natural phenomena. Eleven chapters treat land and aquatic habitats: soil, grassland, and forest communities, coral reef ecosystems, species introductions, endangered species, and human policy issues. Distributed by Island Environments, Book Box 5126, UOG Station, Mangilao, Guam 96923. Paper edition, unsewn, 50 pp. Annotation copyrighted by Book News, Inc., Portland, OR.
