*Nondestructive Characterization of Materials VIII* Robert E. Green, 2012-12-06 Different physical models for the Snoek type relaxation in ternary systems Fe C Me are analyzed from the viewpoint of a distance of interatomic interaction taken into account For non saturated from the viewpoint of overlapping of interatomic interaction in b c c alloys the physically sufficient and optimal for the computer simulation is the short range

model which takes into account the interatomic interaction and the average amount of substitutional atoms in the first coordination shell only For high alloyed b c c systems i e with the overlapped interatomic interaction the carbon atom undergoes an interaction of a few substitutional atoms simultaneously That leads to the appearance of one broadened Snoek peak Activation energy of such a peak is summed from the elastic and chemical interatomic interactions Experimental results for alloys with b c c solid solution structure and its computer simulations allow to introduce the new criterion for the high alloy state of monophasic steels the high alloyed state corresponds to the situation when substitutional atoms can not be considered any longer as the isolated atoms From the viewpoint of mechanical spectroscopy this situation corresponds to the appearance of one broadened IF Snoek type peak instead of two peaks existed for the steels with lower substitutional atom concentration

*Characterization of Liquids, Nano- and Microparticulates, and Porous Bodies using Ultrasound* Andrei S. Dukhin, Philip J. Goetz, 2010-06-03 Two key words define the scope of this book ultrasound and colloids Historically there has been little real communication between practitioners in these two fields Although there is a large body of literature devoted to ultrasound phenomenon in colloids there is little recognition that such phenomena may be of real importance for both the development and applications of colloid science On the other side colloid scientists have not embraced acoustics as an important tool for characterizing colloids The lack of any serious dialogue between these scientific fields is the biggest motivation behind this book Covers in detail this multidisciplinary field combining acoustics electroacoustics colloid science analytical chemistry and rheology Provides a bibliography with more than 1 000 references Presents theories and their experimental verification as well as analysis of the methods and hardware pertaining to applications such as pharmaceuticals ceramics and polymers

**Spectroscopic Methods in Food Analysis** Adriana S. Franca, Leo M.L. Nollet, 2017-12-14 Given the inherent complexity of food products most instrumental techniques employed for quality and authenticity evaluation e g chromatographic methods are time demanding expensive and involve a considerable amount of manual labor Therefore there has been an increasing interest in simpler faster and reliable analytical methods for assessing food quality attributes Spectroscopic Methods in Food Analysis presents the basic concepts of spectroscopic methods together with a discussion on the most important applications in food analysis The determination of product quality and authenticity and the detection of adulteration are major issues in the food industry causing concern among consumers and special attention among food manufacturers As such this book explains why spectroscopic methods have been extensively employed to the analysis of food products as they often require minimal or no sample preparation provide rapid and on line analysis and have the potential to run multiple tests on a single sample i e non destructive This book consists of concepts related to food quality and authenticity that are quite broad given the different demands of the manufacturer the consumer the surveillance and the legislative bodies that ultimately provide healthy and safe products
