Ultrastructure of Mast Cells and Basophils Ann M. Dvorak, 2005-01-01 In this book the author reviews the ultrastructural studies of basophils and mast cells performed since the publication of an earlier monograph in 1991 These studies include the use of ultrastructural rules that allow identification of basophils and mast cells in new circumstances Including more than 180 excellent micrographs this book will be of interest to basic scientists in immunology cell biology secretion and angiogenesis research and histochemistry As mast cells and basophils play a crucial role in various diseases it will be essential reading for allergists immunologists dermatologists hematologists gastroenterologists rheumatologists neurologists pathologists pulmonologists and cardiologists *Charophytes: Evolutionary Ancestors of Plants and Emerging Models for Plant Research* David S. Domozych, Zoë A. Popper, Iben Sørensen, 2017-05-11 The charophytes are the group of green algae that are aneutral and most closely related to land plants Today these organisms are not only important in evolutionary studies but have become outstanding model organisms for plant research **Advanced Biofuels** Kalam Abul Azad, Mohammad Rasul, 2019-06-09 *Advanced Biofuels Applications Technologies and Environmental Sustainability* presents recent developments and applications of biofuels in the field of internal combustion engines with a primary focus on the recent approaches of biodiesel applications low emission alternative fuels and environmental sustainability Editors Dr Azad and Dr Rasul along with their team of expert contributors combine a collection of extensive experimental investigations on engine performance and emissions and combustion phenomena using different types of oxygenated fuel with in depth research on fuel applications an analysis of available technologies and resources energy efficiency improvement methods and applications of oxygenated fuel for the sustainable environment Academics researchers engineers and technologists will develop a greater understanding of the relevant concepts and solutions to the global issues related to achieving alternative energy application for future energy security as well as environmental sustainability in medium and large scale industries Fills a gap in the literature on alternative fuel applications with in depth research and experimental investigations of different approaches technologies and applications Considers the important issue of sustainability using case studies to deepen understanding Includes energy security within various industries including aviation and transport Microbial Control of the Nitrogen Cycle Lourdes Girard, Juan Sanjuan, Maria J. Delgado, 2020-07-02 *Structure and Evolution of Invertebrate Nervous Systems* Andreas Schmidt-Rhaesa, Steffen Harzsch, Günter Purschke, 2015-12-17 The nervous system is particularly fascinating for many biologists because it controls animal characteristics such as movement behavior and coordinated thinking Invertebrate neurobiology has traditionally been studied in specific model organisms whilst knowledge of the broad diversity of nervous system architecture and its evolution among metazoan animals has received less attention This is the first major reference work in the field for 50 years bringing together many leading evolutionary neurobiologists to review the most recent research on the structure of invertebrate nervous systems and provide a comprehensive and

authoritative overview for a new generation of researchers Presented in full colour throughout Structure and Evolution of Invertebrate Nervous Systems synthesizes and illustrates the numerous new findings that have been made possible with light and electron microscopy These include the recent introduction of new molecular and optical techniques such as immunohistochemical staining of neuron specific antigens and fluorescence in situ hybridization combined with visualization by confocal laser scanning microscopy New approaches to analysing the structure of the nervous system are also included such as micro computational tomography cryo soft X ray tomography and various 3 D visualization techniques The book follows a systematic and phylogenetic structure covering a broad range of taxa interspersed with chapters focusing on selected topics in nervous system functioning which are presented as research highlights and perspectives This comprehensive reference work will be an essential companion for graduate students and researchers alike in the fields of metazoan neurobiology morphology zoology phylogeny and evolution

Abiotic Stresses in Field Crops: Response, Impacts and Management under Climate Change Scenario Aliza Pradhan, Kamal Krishna Pal, Mahesh Kumar, Ashim Datta, Milan Kumar Lal, Md Khairul Alam, Basavaraj P. S., 2025-01-17 Agriculture is globally challenged by adverse environmental factors including drought heat waterlogging cold soil salinity and sodicity nutrient deficiency heavy metal contamination and other edaphic stresses These stresses impair plant functioning at multiple levels limiting plant development and crop productivity In the current climate change scenario the increase in frequency and intensity of these stresses is posing a serious threat to overall food and nutrition security Plants respond to these stresses through several tolerance mechanisms operating at molecular biochemical physiological or morpho anatomical levels depending on their developmental stage and type of species The cope up strategy also differs depending on abiotic stress type duration and intensity The extent to which these changes occur to counteract the impact of abiotic stresses as well as the pathways involved in plant acclimation is not fully understood An advance in understanding agricultural crops adaptation and tolerance mechanisms underlying trans generational effects epigenetic changes and stress memory will significantly help in comprehending the implications as well as devising mitigation strategies for sustainable agriculture and thus food security Additionally it is crucial to understand the interactions and impacts of combined stresses to efficiently advance the development of combined stress tolerant crops as well as devising mitigation strategies for various climatic stressors
