Improving School-to-Work Transitions David Neumark, 2007-01-09 As anxieties about America's economic competitiveness mounted in the 1980s so too did concerns that the nation's schools were not adequately preparing young people for the modern workplace Spurred by widespread joblessness and job instability among young adults the federal government launched ambitious educational reforms in the 1990s to promote career development activities for students In recent years however the federal government has shifted its focus to test based reforms like No Child Left Behind that emphasize purely academic subjects At this critical juncture in education reform Improving School To Work Transitions edited by David Neumark weighs the successes and failures of the 90s era school to work initiatives and assesses how high schools colleges and government can help youths make a smoother transition into stable well paying employment Drawing on evidence from national longitudinal studies surveys interviews and case studies the contributors to Improving School To Work Transitions offer thought provoking perspectives on a variety of aspects of the school to work problem Deborah Reed Christopher Jepsen and Laura Hill emphasize the importance of focusing school to work programs on the diverse needs of different demographic groups particularly immigrants who represent a growing proportion of the youth population David Neumark and Donna Rothstein investigate the impact of school to work programs on the forgotten half students at the greatest risk of not attending college Using data from the 1997 National Longitudinal Study of Youth they find that participation by these students in programs like job shadowing mentoring and summer internships raise employment and college attendance rates among men and earnings among women In a study of nine high schools with National Academy Foundation career academies Terry Orr and her fellow researchers find that career academy participants are more engaged in school and are more likely to attend a four year college than their peers Nan Maxwell studies the skills demanded in entry level jobs and finds that many supposedly low skilled jobs actually demand extensive skills in reading writing and math as well as the new basic skills of communication and problem solving Maxwell recommends that school districts collaborate with researchers to identify which skills are most in demand in their local labor markets At a time when test based educational reforms are making career development programs increasingly vulnerable it is worth examining the possibilities

and challenges of integrating career related learning into the school environment Written for educators policymakers researchers and anyone concerned about how schools are shaping the economic opportunities of young people *Improving School To Work Transitions* provides an authoritative guide to a crucial issue in education reform *Transition from School to Work*, 2015 Opportunities for Ohioans with Disabilities OOD is a state agency that as part of their mission helps students with disabilities successfully transition from school to work Transition teams work together to develop activities and experiences designed to provide students with the necessary skills and knowledge to reach their post secondary goals

Jukka Vuori, Roland Blonk, Richard H. and Employment Peter Ackers, Adrian Wilkinson, 2003 This book aims to analyze and criticize the contribution of industrial relations to social science understanding It brings together leading scholars to reconsider the theoretical foundations of industrial relations and its potential contribution to the wider understanding of work and economic life to learn what it can gain from a stronger engagement with these surrounding disciplines and national traditions The introduction provides a critical though broadly sympathetic outline of the development of the main stream industrial relations tradition Part One recognizes the interdisciplinary character of industrial relations by concentrating on border encounters with the cognate academic disciplines of sociology economics management history psychology law politics and geography Of particular interest is how far industrial relations has contributed to social science understanding beyond its own narrow borders Part Two combines a major critical analysis of the American school with three shorter discussions of Australia Europe and Japan Part Three looks forward to the potential contribution of industrial relations to our understanding of work employment and society by identifying a variety of key dilemmas and debates which call for new interdisciplinary thinking Finally the book ends with a critical reassessment of the industrial relations tradition Work and Mental Illness Bertram J.
