Seminal Contributions to Information Systems Engineering

Janis Bubenko,John Krogstie,Oscar Pastor,Barbara Pernici,Colette Rolland,Arne Sølvberg,2013-06-13 In 2013 the International Conference on Advance Information Systems Engineering CAiSE turns 25 Initially launched in 1989 for all these years the conference has provided a broad forum for researchers working in the area of Information Systems Engineering To reflect on the work done so far and to examine prospects for future work the CAiSE Steering Committee decided to present a selection of seminal papers published for the conference during these years and to ask their authors all prominent researchers in the field to comment on their work and how it has developed over the years The scope of the papers selected covers a broad range of topics related to modeling and designing information systems collecting and managing requirements and with special attention to how information systems are engineered towards their final development and deployment as software components With this approach the book provides not only a historical analysis on

how information systems engineering evolved over the years but also a fascinating social network analysis of the research community Additionally many inspiring ideas for future research and new perspectives in this area are sparked by the intriguing comments of the renowned authors

Advanced Information Systems Engineering Matthias Jarke, Andreas Oberweis, 2003-05-21 This book constitutes the refereed proceedings of the 11th International Conference on Advanced Information Systems Engineering CAiSE 99 held in Heidelberg Germany in June 1999 The 27 revised full papers presented together with 12 short research papers and two invited contributions were carefully selected from a total of 168 submissions The papers are organized in topical sections on components information systems management method engineering data warehouses process modeling CORBA and distributed information systems workflow systems heterogeneous databases and information systems dynamics

The Cumulative Book Index, 1999 *SIGGROUP Bulletin*, 1998 **Software Engineering--ESEC/FSE ...**, 1999 Modeling and Transformation of Workflows with Temporal Constraints Wolfgang Gruber, 2004 Workflow management systems support the execution of business processes They require the modeling of the processes they drive the actual enactment of process instances and they document the business process execution Many different modeling languages and systems have been developed for design and representation of business processes and workflows as a consequence of different requirements different purposes and also different schools and modeling philosophies The differences are partly on a conceptual level in the sense that the modeling languages offer different concepts and constructs and partly on the representation level where basically the same constructs are represented differently e g text or graph based This book makes two important contributions to workflow modeling First it provides a meta model based on abstract modeling concepts allowing to overcome representation differences of workflow descriptions and secondly it introduces a set of equivalence transformations on workflow models Such transformations are an important tool for workflow developments as they allow representing workflows differently for different purposes These transformations are used in algorithms for checking the ability of temporal constraints in workflow definitions and using this apparatus made it possible to develop a great sophisticated time management system for workflows which not only checks temporal constraints but can also be used to develop time plans for workflow execution

Communication and

Collaboration Support Systems Kenichi Okada, Tohru Hoshi, Tomoo Inoue, 2005 It was approximately two decades ago that the support of communication and collaboration became an important research issue The technical stimulation for this was the spread of personal computers and computer networks whilst the social driver was the demand for the support of everyday work frequently including group work and teamwork This field of research has become known as Computer Supported Cooperative Work whilst the systems to support group work are called groupware Over the two decades research has been extensively conducted Various Web based systems have been researched some of which are aimed at the support of communication and collaboration Mobile phones have spread rapidly and communication and collaboration support systems have also been researched on this platform There are many other technologies such as virtual reality robotics multimedia and ubiquitous computing each of which provides opportunities for the research field As the research field is not dependent on the type of technology but is dependent on the needs of human activity and human beings are social animals the technical demands of supporting social activities do not diminish Technologies that potentially are useful for this purpose are being investigated whilst new technologies are invented As a result of the development of IT the research and development of communication and collaboration systems is increasingly active The scope of this publication extends from perspectives design principles guidelines and social aspects of communication and collaboration support systems to the various application systems and the platform technologies
