Garmisch-Partenkirchen, Germany, July 17-22, 1994, 1995 *Zeolites and Ordered Mesoporous Materials: Progress and Prospects* Jiri Cejka, Herman van Bekkum, 2005-10-03 Zeolites are the most frequently used industrial catalysts Their applications range from oil refining petrochemistry and the synthesis of special chemicals to environmental catalysis Rapid progress in basic research and the development of new processes has resulted in the first Federation of European Zeolite Associations FEZA School on Zeolites Zeolites and Ordered Mesoporous Materials Progress and Prospects reflects the programme of the first School on Zeolites held in Prague on August 20-21 2005 Readers gain insight into the synthesis of the ever expanding spectrum of zeolites zeotypes and ordered mesoporous materials including the use of zeolites and mesoporous materials as catalysts in organic conversions These range from the fascinating ship in bottle systems via cascade reactions to bulk applications in oil refining and petrochemistry Contributions from world experts enhance the book with select chapters on trends in the molecular sieves field zeolite structures ion exchange properties of zeolites advanced applications with unique technologies and opportunities and a chapter on natural zeolites Contains contributions from world experts in the field Includes an account of the frontier topic of high throughput techniques Reviews the application of quantum chemical methods to zeolite science to show the necessity of combining experimental and theoretical approaches

Hydrotreatment and Hydrocracking of Oil Fractions B. Delmon, P. Grange, G.F. Froment, 1999-11-03 The 2nd International Symposium on Hydrotreatment and Hydrocracking of Oil Fractions which is also the 7th in the series of European Workshops on Hydrotreatment took place in Antwerpen Belgium from November 14 to 17 The Symposium emphasized how oil refining faces increasingly severe environmental regulations These and the increasing application of heavier crudes containing more

S N and metal components call for more efficient hydrotreatment and hydrocracking processes It is clear from the keynote lectures the oral contributions and the posters of this meeting that adapting the operating conditions will not suffice Adequate catalysts need to be developed with different composition and structure Surface science techniques and molecular modeling are now well established tools for such a development They should be of help in widely different aspects like the role of precursors in the preparation or the modifications undergone by the catalyst under reaction conditions The improvement of hydrotreatment and hydrocracking also needs accurate modeling of the chemical reactor This requires more representative hydrodynamics and kinetic models whose validity extends to the very low S and N contents These areas should be vigorously developed

Dynamics of Surfaces and Reaction Kinetics in Heterogeneous Catalysis G.F. Froment,K.C. Waugh,1997-09-03 Many processes of the chemical industry are based upon heterogeneous catalysis Two important items of these processes are the development of the catalyst itself and the design and optimization of the reactor Both aspects would benefit from rigorous and accurate kinetic modeling based upon information on the working catalyst gained from classical steady state experimentation but also from studies using surface science techniques from quantum chemical calculations providing more insight into possible reaction pathways and from transient experimentation dealing with reactions and reactors This information is seldom combined into a kinetic model and into a quantitative description of the process Generally the catalytic aspects are dealt with by chemists and by physicists while the chemical engineers are called upon for mechanical aspects of the reactor design and its control The symposium Dynamics of Surfaces and Reaction Kinetics in Heterogeneous Catalysis aims at illustrating a more global and concerted approach through a number of prestigious keynote lectures and severely screened oral and poster presentations

Third World Congress on Oxidation Catalysis S.T. Oyama,A.M. Gaffney,J.E. Lyons,R.K. Grasselli,1997-09-12 The overall theme of the 3rd World Congress is Atom Efficient Catalytic Oxidations for Global Technologies This theme was chosen to

stimulate the participants to report their findings with an emphasis on conserving valuable material in their catalytic transformations as well as conserving energy in an environmentally responsible manner Progress towards this stated goal is substantial as evidenced by the tremendous response of the community in their participation of quality publications compiled in these Proceedings of the Congress The subjects presented span a wide range of oxidation reactions and catalysts These include the currently important area of lower alkane oxidation to the corresponding olefins unsaturated aldehydes acids and nitriles The four featured lectures and seven plenary lectures constitute the general background and overview of the subject matter at hand The 104 contributed papers and 13 poster manuscripts summarized in this compendium probe new avenues to achieve catalytically efficient oxidation reactions for the future needs of mankind in a global environment

Delmon, G.F. Froment, 1999-09-22 Studies in catalyst deactivation play a major role in the identification of the real catalytic system in particular the structure and texture of the solid which is often in a metastable state as it is operated in the industrial reactor These studies also allow the identification of the experimental conditions which preserve this active and selective state This is crucial for a real understanding of catalysts and catalysis Another area of catalytic science concerns reactions kinetics which if properly determined are of paramount importance in the elucidation of mechanisms The behavior of the kinetics during aging and deactivation and an accurate modeling of the evolution of activity and selectivity are essential information for the process performance These are just two typical examples but quite generally the science of catalyst deactivation is going to be more oriented to fundamental issues *Semiconductor Nanoclusters - Physical, Chemical, and Catalytic Aspects* P.V. Kamat, D. Meisel, 1997 During the past decade there has been a phenomenal growth in the basic research of semiconductor nanoclusters and other nanomaterials As the field has evolved the emphasis has shifted from basic theoretical description to field utilization of nanostructure based devices The topics of the various chapters presented in this book written by leaders in the field highlight the salient features of nanocrystalline semiconductor materials Features of this book Provides synthetic strategies to generate ultrasmall particles films and wires Describes the characterization methodologies of a large number of nanomaterials from the molecular level to the long range crystallographic ordering Develops theoretical descriptions of present day quantum confinement effects in various materials including metallic particles III V semiconductors and porous silicon Explores the fate of photoinduced charge carriers in these materials and the phenomena of charge transfer across interfaces Covers the utilization of these newly discovered effects in analytical chemistry organic synthesis environmental remediation and electrochemistry The aim of the book is to present the necessary background material for advanced undergraduate students in the field of physical chemistry and materials science and provide a reference book for the experts in this area *11th International Congress on Catalysis, 40th Anniversary* Joe W.
