Beyond Science and Empire Matheus Alves Duarte da Silva, Thomás A. S. Haddad, Kapil Raj, 2023-09-23 Through ten case studies by international specialists this book investigates the circulation and production of scientific knowledge between 1750 and 1945 in the fields of agriculture astronomy botany cartography medicine statistics and zoology In this period most of the world was under some form of imperial control while science emerged as a discrete field of activity What was the relationship between empire and science Was science just an instrument for imperial domination While such guiding questions place the book in the tradition of science and empire studies it offers a fresh perspective in dialogue with global history and circulatory approaches The book demonstrates not by theoretical discourse but through detailed historical case studies that the adoption of a global scale of analysis or an emphasis on circulatory processes does not entail analytical vagueness diffusionism in disguise or complacency with imperialism The chapters show scientific knowledge emerging from the actions of little known individuals moving across several Empires European Asian and South American alike in unanticipated places and institutions and through complex processes of exchange competition collaboration and circulation of knowledge The book will interest scholars and undergraduate and graduate students concerned with the connections between the history of science imperial history and global history
