The Intervertebral Disc Irving M. Shapiro, Makarand V. Risbud, 2013-09-02 The intervertebral disc is a complex structure that separates opposing vertebrae permits a wide range of motion and accommodates high biomechanical forces Disc degeneration leads to a loss of function and is often associated with excruciating pain Written by leading scientists and clinicians the first part of the book provides a review of the basic biology of the disc in health and disease The second part considers strategies to mitigate the effects of disc degeneration and discusses the possibility of engineering replacement tissues The final section is devoted to approaches to model normal development and elucidate the pathogenesis of degenerative disc disease using animal organ and cell culture techniques The book bridges the gap between the basic and clinical sciences the target audience includes basic scientists orthopaedists and neurologists while at the same time appealing to the needs of graduate students medical students interns and fellows

Gene and Cell Delivery for Intervertebral Disc Degeneration Raquel Madeira Gonçalves,Mario Adolfo Barbosa,2018-04-27 Intervertebral disc degeneration is one of the major causes of lower back pain for which the common therapeutic interventions are not efficient A search for alternative therapies for lower back pain and intervertebral disc degeneration includes cell based therapies Unfortunately intervertebral disc degeneration is avascular and thus a hostile environment for cell survival Furthermore cellular characterization in intervertebral disc degeneration and particularly in the nucleus pulposus is controversial mainly due to lack of specific markers and species variability This book adds to the knowledge on cellular and molecular therapies for intervertebral disc degeneration and associated lower back pain Key Selling Features Describes the ontogeny and phenotype of intervertebral disc cells Reviews the role that inflammation plays in disco genic pain Highlights the types of cells that might be used as sources for treating degenerating intervertebral discs Summarizes current alternative therapies Explores methods for cell delivery into degenerated intervertebral discs

Cells and Biomaterials for Intervertebral Disc Regeneration Sibylle Grad,2010 Disorders related to the intervertebral disc IVD are common causes of morbidity and of severe life quality deterioration IVD degeneration although in many cases asymptomatic is often the origin of painful neck and back diseases In Western societies IVD related pain and disability account for enormous health care costs as a result of work absenteeism and thus lost production disability benefits medical and insurance expenses Although only a small percentage of patients with disc disorders finally will undergo surgery spinal surgery has been one of the fastest growing disciplines in the musculoskeletal field in recent years

Nevertheless current treatment options are still a matter of controversial discussion In particular they hardly can restore normal spine biomechanics and prevent degeneration of adjacent tissues While degeneration affects all areas of the IVD the most constant and noticeable changes occur in the gel like central part the nucleus pulposus NP Recent emphasis has therefore been put in biological ways to regenerate the NP however there are a number of obstacles to overcome considering the exceptional biological and biomechanical environment of this tissue Different biological approaches such as molecular gene and cell based therapies have been investigated and have shown promising results in both in vitro and in vivo studies Nonetheless considerable hurdles still exist in their application for IVD regeneration in human patients The choice of the cells and the choice of the cell carrier suitable for implantation pose major challenges for research and development activities This lecture recapitulates the basics of IVD structure function and degeneration mechanisms The first part reviews the recent progress in the field of disc and stem cell based regenerative approaches In the second part most appropriate biomaterials that have been evaluated as cell or molecule carrier to cope with degenerative disc disease are outlined The potential and limitations of cell and biomaterial based treatment strategies and perspectives for future clinical applications are discussed Table of Contents Cell Therapy for Nucleus Pulposus Regeneration Recent Advances in Biomaterial Based Tissue Engineering for Intervertebral Disc Regeneration **The Intervertebral Foramen** Harold Swanberg,1914

Lesions of the Cervical Intervertebral Disc Roy Glen Spurling,1956 **Clinical Anatomy of the Lumbar Spine and Sacrum** Nikolai Bogduk,2005-01-01 Bogduk aims to provide a foundation of knowledge upon which an understanding of the various treatment and therapy techniques of the different specialities involved can be built This edition includes discussion of the sacrum and sacro iliac joint
