Vision in the Novels of George Sand Manon Mathias, 2015-12-17 The first study of George Sand and vision this book considers the pull between the visual and the visionary in nineteenth century France through an examination of Sand's novels With an extensive corpus ranging from Sand's early texts through to her later less familiar works it repositions Sand's oeuvre alongside that of the major realist authors and demonstrates her distinctive understanding of the novel as a combination of the concrete and the abstract By studying Sand's engagement with visual models associated with realism the mirror the model of painting and the scientific gaze this book proposes a more sustained dialogue between Sand's work and realism than has hitherto been acknowledged but argues that Sand radically reworks these models to depict a dynamic mysterious and ever changing world Whereas Sand has been read as an author bypassing reality in favour of the ideal this study shows that she is committed to physical observation but that she consistently ties this process with the conceptual and the visionary

The book breaks new ground in particular by examining Sand s literary engagement with the visual arts and it also offers the first sustained consideration of Sand as a scientific writer By examining Sand s uvre from the perspective of vision this study not only reassesses Sand s writing practice but also rethinks the relations between the visual and the novel in this period More specifically it argues that Sand s work challenges our means of theorizing these relations In her rejection of binaries and her syncretic understanding of vision Sand breaks conventional categories and writes novels that are at once realist visionary mystical and scientific
