Visual Form Detection In Three Dimensional Space:

Visual Form Detection in Three-dimensional Space W. R. Uttal, 2013-08-21 Published in the year 1982 Visual Form Detection in Three dimensional Space is a valuable contribution to the field of Cognitive Psychology *Visual Form Detection in 3-dimensional Space* William R. Uttal, 1983 This monograph presents the results of a program of research dealing with the detection of dotted stimulus forms embedded in dotted visual noise Nineteen experiments are described concerning the detection of single flashing dots dotted lines and both random and regularly dotted planes A mathematical model based upon the autocorrelational transform is also tested for some of the experiments Among the most important findings are a remarkable insensitivity of the perceptual system to temporal and spatial irregularities and a qualitative difference in the way observers deal with planes formed from random dot arrays and dotted outlines respectively The autocorrelation model is in general agreement with the psychophysical results against which it is tested The main conclusion arising from this research may be summarized as the rule of linear periodicity Observers are sensitive to forms to the extent that they contain dotted straight lines with equal interdot spacing This sensitivity appears to be a primitive of visual perception in a manner that is analogous to the sensitivity exhibited by the autocorrelation to periodic forms Historical and lexicographic matters pertaining to the problem of form perception are also discussed in this monograph Author [The Detection of Nonplanar Surfaces in Visual Space](#) W. R. Uttal, 2014-01-14 First published in 1984 This monograph is the third in a series that examines the nature of a midlevel visual process relatively uncontaminated by either peripheral receptor or central cognitive processing The paradigm utilized in this study selectively assays what seems to be a relatively fixed algorithmic mechanism involved in the extraction of dotted stimulus forms from masks consisting of random dots

Perceptual Organization in Computer and Biological Vision James Elder, Dirk Bernhardt-Walther, Anitha Pasupathy, Mary A. Peterson, 2024-08-22 A principal challenge for both biological and machine vision systems is to integrate and organize the diversity of cues received from the environment into the coherent global representations we experience and require to make good decisions and take effective actions Early psychological investigations date back more than 100 years to the seminal work of the Gestalt school Yet in the last 50 years neuroscientific and computational approaches to understanding perceptual organization have become equally important and a full understanding requires integration of all three approaches This highly interdisciplinary Research Topic welcomes contributions spanning Computer Science Psychology and Neuroscience with the aim of presenting a single unified collection that will encourage integration and cross fertilization across disciplines **On Seeing Forms** William R. Uttal, 2014-06-27 Originally published in 1988 this is the final volume in the set The original intent of the tetralogy was to review neural explanations of high level perceptual and cognitive processes However at this point it became clear that there were few neural explanations of perceptual topics a situation that still persists today This book therefore used a different framework examining the role of detection discrimination and recognition at the behavioral level

Perceiving in Depth, Volume 1: Basic Mechanisms Ian P. Howard, 2012-01-27 The three volume work *Perceiving in Depth* is a sequel to *Binocular Vision and Stereopsis* and to *Seeing in Depth* both by Ian P Howard and Brian J Rogers This work is much broader in scope than the previous books and includes mechanisms of depth perception by all senses including aural electrosensory organs and the somatosensory system Volume 1 reviews sensory coding psychophysical and analytic procedures and basic visual mechanisms Volume 2 reviews stereoscopic vision Volume 3 reviews all mechanisms of depth perception other than stereoscopic vision The three volumes are extensively illustrated and referenced and provide the most detailed review of all aspects of perceiving the three dimensional world Volume 1 starts with a review of the history of visual science from the ancient Greeks to the early 20th century with special attention devoted to the discovery of the principles of perspective and stereoscopic vision The first chapter also contains an account of early visual display systems such as panoramas and peepshows and the development of stereoscopes and stereophotography A chapter on the psychophysical and analytic procedures used in investigations of depth perception is followed by a chapter on sensory coding and the geometry of visual space An account of the structure and physiology of the primate visual system proceeds from the eye through the LGN to the visual cortex and higher visual centers This is followed by a review of the evolution of visual systems and of the development of the mammalian visual system in the embryonic and post natal periods with an emphasis on experience dependent neural plasticity An account of the development of perceptual functions especially depth perception is followed by a review of the effects of early visual deprivation during the critical period of neural plasticity on amblyopia and other defects in depth perception Volume 1 ends with accounts of the accommodation mechanism of the human eye and vergence eye movements

The Perception of Dotted Forms William R. Uttal, 2014-02-25 First published in 1987 This book is the fourth in a series of research monographs reporting the results of a continuing study that deals with the perception of form in two and three dimensional space

Scientific and Technical Aerospace Reports, 1983

The Uttal Tetralogy of Cognitive Neuroscience William R. Uttal, 2022-07-30 These four volumes originally published between 1973 and 1988 were intended to provide a broad survey of cognitive neuroscience a field known variously as physiological psychology or psychobiology in the 1970s and 1980s when the books were written The general goal was to summarize what was known about the relation between brain and mind at that time with an emphasis on sensory and perceptual topics Out of print for many years the Tetralogy is now available again as a set for the first time which is as the author envisaged it or as individual volumes

The Top Books of the Year Visual Form Detection In Three Dimensional Space The year 2023 has witnessed a remarkable surge in literary brilliance, with numerous compelling novels captivating the hearts of readers worldwide. Lets delve into the realm of top-selling books, exploring the fascinating narratives that have charmed audiences this year. The Must-Read :

Colleen Hoover's "It Ends with Us" This touching tale of love, loss, and resilience has captivated readers with its raw and emotional exploration of domestic abuse. Hoover expertly weaves a story of hope and healing, reminding us that even in the darkest of times, the human spirit can triumph.

Visual Form Detection In Three Dimensional Space : Taylor Jenkins Reids "The Seven Husbands of Evelyn Hugo" This intriguing historical fiction novel unravels the life of Evelyn Hugo, a Hollywood icon who defies expectations and societal norms to pursue her dreams. Reids captivating storytelling and compelling characters transport readers to a bygone era, immersing them in a world of glamour, ambition, and self-discovery.

Discover the Magic : Delia Owens "Where the Crawdads Sing" This mesmerizing coming-of-age story follows Kya Clark, a young woman who grows up alone in the marshes of North Carolina. Owens crafts a tale of resilience, survival, and the transformative power of nature, captivating readers with its evocative prose and mesmerizing setting.

These top-selling novels represent just a fraction of the literary treasures that have emerged in 2023. Whether you seek tales of romance, adventure, or personal growth, the world of literature offers an abundance of captivating stories waiting to be discovered.

The novel begins with Richard Papen, a bright but troubled young man, arriving at Hampden College. Richard is immediately drawn to the group of students who call themselves the Classics Club. The club is led by Henry Winter, a brilliant and charismatic young man. Henry is obsessed with Greek mythology and philosophy, and he quickly draws Richard into his world. The other members of the Classics Club are equally as fascinating. Bunny Corcoran is a wealthy and spoiled young man who is always looking for a good time. Charles Tavis is a quiet and reserved young man who is deeply in love with Henry. Camilla Macaulay is a beautiful and intelligent young woman who is drawn to the power and danger of the Classics Club. The students are all deeply in love with Morrow, and they are willing to do anything to please him. Morrow is a complex and mysterious figure, and he seems to be manipulating the students for his own purposes. As the students become more involved with Morrow, they begin to commit increasingly dangerous acts.

The Secret History is a brilliant and suspenseful novel that will keep you speculating until the very end. The novel is a cautionary tale about the dangers of obsession and the power of evil.
