Learning and Teaching Early Math Douglas H. Clements, Julie Sarama, 2014-05-23 In this important book for pre and in service teachers early math experts Douglas Clements and Julie Sarama show how learning trajectories help diagnose a child s level of mathematical understanding and provide guidance for teaching By focusing on the inherent delight and curiosity behind young children s mathematical reasoning learning trajectories ultimately make teaching more joyous They help teachers understand the varying levels of knowledge exhibited by individual students which in turn allows them to better meet the learning needs of all children Using straightforward no nonsense language this book summarizes the current research about how children learn mathematics and how to build on what children already know to realize more effective teaching This second edition of *Learning and Teaching Early Math* remains the definitive research based resource to help teachers understand the learning trajectories of early mathematics and become quintessential professionals Updates to the new edition include Explicit connections between Learning Trajectories and the new Common Core State Standards New coverage of patterns and patterning Incorporation of hundreds of recent research studies

Early Numeracy Robert J Wright, James Martland, Ann K Stafford, 2006-01-05 Unlike many books based on research work this book doesn t just let teachers know what is going wrong with children s learning it actually gives some practical advice about what to do next The whole book is based upon extensive observation and recording of individual children and their difficulties with mathematics These children are the most difficult to plan for in a busy classroom and the authors appreciate the small steps and the different learning styles approaches needed for these children This approach fits well with the NNS wave and springboard materials but takes the analysis of the individual s difficulties to a more detailed level The book brings together research carried out across a range of countries and therefore shows the versatility of the approaches taken This will be a very useful book for trainee teachers as it exemplifies how to use assessment to feed into teaching It will be helpful for class teachers and mathematics co ordinators as well as SENCOs to assist in improving the teaching and learning for specific children in our schools Mary Briggs Primary and Early Years PGCE Co ordinator Institute of Education University of Warwick This is a highly practical resource that will be appreciated by classroom and specialist teachers alike It will provide teachers new to
