Embracing Gender Equity and Diversity to enable all the member of the community to maximise their opportunity withing the sector The Quarterly Journal of Engineering Geology ,1998 **Earth Surface Processes and Landforms** Jack Hardisty,1993 **Process Models and Theoretical Geomorphology** M. J. Kirkby,1994-03-08 Multinational contributors present articles on a wide range of themes but with important convergences of interest on critical topics A group of papers on tectonic and general approaches reviews the role of randomness in process models and provides a novel theoretical analysis of the relationships between tectonic and erosional forces Selections on channel processes reflect current interest in gravel bed rivers related to their widespread occurrence in mountain areas and in braided systems Articles on valley heads bring together views from several sometimes conflicting research approaches The final group of contributions illustrate the range of problems to which theoretical methods in geomorphology can now be applied *Earth Surface Processes and Landforms* Jack Hardisty,1994 Investigating Connectivity to Advance the Predictive Understanding of Watershed Processes and the Earth's Critical Zone Dipankar Dwivedi,Ronald Erwin Pöppel,Ellen Wohl,2025-05-15 Connectivity implies the pathways that link organisms energy and matter across different compartments of the Earth s critical zone it also refers to the links that key processes have to deep hydrological flow paths and atmospheric circulation systems Although connectivity has been long investigated in geomorphology the usage of connectivity in other cognate disciplines such as hydrology biogeochemistry and watershed science has occurred only recently A major driver for the development of a broader definition and investigation came from the Geomorphology Symposium organized around the connectivity theme in 2015 <https://www.binghamtongeomorph.com> Six key themes from the symposium included sediment connectivity hydrologic connectivity geochemical connectivity riverine connectivity landscape connectivity and connectivity modeling Since the Geomorphology Symposium in 2015 significant progress has been achieved in understanding the evolution of connectivity and the quantification of various aspects of connectivity and its thresholds However several opportunities still exist for unlocking the full potential of a broad consideration of connectivity and thereby advancing the predictive understanding of watershed processes at multiple scales and the Earth s critical zone Here we invite theoretical and data driven contributions that can contribute using connectivity constructs Topics of interest include but are not limited to 1 Elucidation of the current state of knowledge regarding the concept of connectivity vis vis six themes mentioned above in watershed sciences and the Earth s critical zone and its underlying theoretical assumptions 2 New approaches including machine learning and artificial intelligence that make use of a spectrum of data sources to quantify connectivity and the interactions between different types of connectivity 3 Novel frameworks making use of the broad concepts of connectivity in watershed and reactive transport models to understand hydrobiogeochemical dynamics and predict transient export of water nitrogen carbon and metals 4 Frameworks to quantify uncertainty and address inherent data challenges for diverse connectivity aspects collapse

**Landforms of the Earth** Francisco Gutiérrez,Mateo Gutiérrez,2016-04-29 This is a highly illustrated book with each

landform being described with the following structure 1 Main characteristics including geometric morphometric and sedimentological features 2 Genetic processes and controlling factors 3 Different typologies if applicable 4 Additional comments related to various relevant aspects such as environmental implications or geographical distribution Image visualization of landforms is essential for learning geomorphology and stimulating the interest in this field based subject a picture is worth a thousand words Consequently the book constitutes a valuable educational resource for every university student enrolled in courses related with earth surface processes and landforms e g Geomorphology Physical Geography Geology Geohazards Environmental Sciences The book is also attractive to travellers and people keen on nature who want to know about the terminology and origin of the landforms they encounter in their trips In many cases the geomorphological features constitute the main asset of first class protected areas e g UNESCO World Heritage Sites National Parks *Arctic, Antarctic, and Alpine Research* ,2005
