High Performance Scientific And Engineering Computing Michael Breuer, Franz Durst, Christoph Zenger, 2012-12-06 In Douglas Adams book Hitchhiker s Guide to the Galaxy hyper intelligent beings reached a point in their existence where they wanted to understand the purpose of their own existence and the universe They

built a supercomputer called Deep Thought and upon completion they asked it for the answer to the ultimate question of life the universe and everything else The computer worked for several millennia on the answers to all these questions When the day arrived for hyper intelligent beings to receive the answer they were stunned shocked and disappointed to hear that the answer was simply 42 The still open questions to scientists and engineers are typically much simpler and consequently the answers are more reasonable Furthermore because human beings are too impatient and not ready to wait for such a long period high performance computing techniques have been developed leading to much faster answers Based on these developments in the last two decades scientific and engineering computing has evolved to a key technology which plays an important role in determining or at least shaping future research and development activities in many branches of industry Development work has been going on all over the world resulting in numerical methods that are now available for simulations that were not foreseeable some years ago However these days the availability of supercomputers with Teraflop performance supports extensive computations with technical relevance A new age of engineering has started
