Userdeveloper Cooperation In Software Development Building Common Ground And Usable Systems:

  User-Developer Cooperation in Software Development Eamonn O'Neill,2012-12-06 The topic of the research reported here is direct user participation in the task based development of interactive software systems Building usable software demands understanding and supporting users and their tasks Users are a primary source of usability requirements and knowledge since users can be expected to have intimate and extensive knowledge of themselves their tasks and their working environment Task analysis approaches to software development encourage a focus on supporting users and their tasks while participatory design approaches encourage users direct active contributions to software development work However participatory design approaches often concentrate their efforts on design activities rather than on wider system development activities while task analysis approaches generally lack active user participation beyond initial data gathering This research attempts an integration of the strengths of task analysis and user participation within an overall software development process This work also presents detailed empirical and theoretical analyses of what it is for users and developers to cooperate of the nature of user developer interaction in participatory settings Furthermore it makes operational and assesses the effectiveness of user participation in development and the impact of user developer cooperation on the resulting software product The research addressed these issues through the development and application of an approach to task based participatory development in two real world development projects In this integrated approach the respective strengths of task analysis and participatory design methods complemented each other s weaker aspects   *User-developer Cooperation in Software Systems Development* Eamonn Joseph O'Neill,1998   Advances in Information Systems Development: Anders G. Nilsson,Remigijus Gustas,Gregory Wojtkowski,Wita Wojtkowski,Stanislaw Wrycza,Joze Zupancic,2010-07-15 Advances in Information Systems Development Bridging the Gap between Academia and Industry Volumes 1 and 2 are the collected proceedings of the Fourteenth International Conference on Information Systems Development Methods and Tools Theory and Practice ISD 2005 Conference These latest volumes on Information Systems Development examine the exchange of ideas between academia and industry and aims to explore new solutions The field of Information Systems Development ISD progresses rapidly continually creating new challenges for the professionals involved New concepts approaches and techniques of systems development emerge constantly in this field The seven conference tracks highlighted at the Fourteenth International Conference on Information Systems Development ISD 2005 Conference Co design of Business and IT Communication and Methods Human Values of Information Technology Service Development and IT Requirements Engineering in the IS Life Cycle Semantic Web Approaches and Applications Management and IT   Maturing Usability Effie Lai-Chong Law,Ebba Hvannberg,Gilbert Cockton,2007-10-24 Maturing Usability provides an understanding of how current research and practice has contributed towards improving quality issues in software interaction and value Divided into three parts Quality in Software looks at how using development tools can enhance the usability of a system and how

methods and models can be integrated into the process to help develop effective user interfaces Quality in Interaction addresses theoretical frameworks on the nature of interactions techniques and metrics for evaluation interaction quality and the transfer of concepts and methods from research to practice Finally Quality in Value assesses the impact that a system has in the real world focusing on increasing the value of usability practice for software development and on increasing value for users A balance between theoretical and empirical approaches is maintained throughout and all those interested in exploring usability issues in human computer interaction will find this a very useful book *Human-Computer Interaction – INTERACT 2005* Maria Francesca Costabile,Fabio Paternò,2005-09-28 We will be sooner or later not only handling personal computers but also mul purpose cellular phones complex personal digital assistants devices that will be context aware and even wearable computers stitched to our clothes we would like these personal systems to become transparent to the tasks they will be performing In fact the best interface is an invisible one one giving the user natural and fast access to the application he or she intends to be executed The working group that organized this conference the last of a long row tried to combine a powerful scientific program with drastic refereeing with an entertaining cultural program so as to make your stay in Rome the most pleasant one all round I do hope that this expectation becomes true July 2005 Stefano Levialdi IEEE Life Fellow INTERACT 2005 General Chairman 1 Peter J Denning ACM Communications April 2005 vol 48 N 4 pp 27 31 Editors Preface INTERACT is one of the most important conferences in the area of Human Computer Interaction at the world wide level We believe that this edition which for the first time takes place in a Southern European country will strengthen this role and that Rome with its history and beautiful setting provides a very congenial atmosphere for this conference The theme of INTERACT 2005 is Communicating Naturally with Computers **Human-computer Interaction** Michitaka Hirose,2001 This book covers the proceedings of INTERACT 2001 held in Tokyo Japan July 2001 The conference covers human computer interaction and topics presented include interaction design usability novel interface devices computer supported co operative works visualization and virtual reality The papers presented in this book should appeal to students and professionals who wish to understand multimedia technologies and human computer interaction **People and Computers XV — Interaction without Frontiers** Ann Blandford,Jean Vanderdonckt,Phil Gray,2011-06-27 In 2001 AFIHM and the British HCI Group combined their annual conferences bringing together the best features of each organisation s separate conference series and providing a special opportunity for the French and English speaking HCI communities to interact This volume contains the full papers presented at IHM HCI 2001 the 15th annual conference of the British HCI group a specialist group of the British Computer Society and the 14th annual conference of the Association Francophone d interaction Homme Machine an independent association for any French speaking person who is interested in Human Computer Interaction Human Computer Interaction is a discipline well suited to such a multi linguistic and multi cultural conference since it brings together researchers and practitioners from a variety of disciplines with very different ways of thinking and working As a

community we are already used to tackling the challenges of working across such boundaries dealing with the problems and taking advantage of the richness of the resulting insights interaction without frontiers The papers presented in this volume cover all the main areas of HCI research but also focus on considering the challenges of new applications addressing the following themes Enriching HCI by crossing national linguistic and cultural boundaries Achieving greater co operation between disciplines to deliver usable useful and exciting design solutions Benefiting from experience gained in other application areas Transcending interaction constraints through the use of novel technologies Supporting mobile users

Desmarais,2005-12-08 Human CenteredSoftwareEngineering BridgingHCI UsabilityandSoftwareEngineering From its beginning in the 1980 s the eld of human computer interaction HCI has beende nedasamultidisciplinaryarena BythisImeanthattherehas beenanexplicit recognition that distinct skills and perspectives are required to make the whole effort of designing usable computer systems work well Thus people with backgrounds in Computer Science CS and Software Engineering SE joined with people with ba grounds in various behavioral science disciplines e g cognitive and social psych ogy anthropology inaneffortwhereallperspectiveswereseenasessentialtocreating usable systems But while the eld of HCI brings individuals with many background disciplines together to discuss a common goal the development of useful usable satisfying systems the form of the collaboration remains unclear Are we striving to coordinate the varied activities in system development or are we seeking a richer collaborative framework In coordination Usability and SE skills can remain quite distinct and while the activities of each group might be critical to the success of a project we need only insure that critical results are provided at appropriate points in the development cycle Communication by one group to the other during an activity might be seen as only minimally necessary In collaboration there is a sense that each group can learn something about its own methods and processes through a close pa nership with the other Communication during the process of gathering information from target users of a system by usability professionals would not be seen as so thing that gets in the way of the essential work of software engineering professionals   End-User Development Volkmar Pipek,Mary-Beth Rosson,Volker Wulf,2009-02-27 Work practices and organizational processes vary widely and evolve constantly The technological infrastructure has to follow allowing or even supporting these changes Traditional approaches to software engineering reach their limits whenever the full spectrum of user requirements cannot be anticipated or the frequency of changes makes software reengineering cycles too clumsy to address all the needs of a specific

field of application Moreover the increasing importance of infrastructural aspects particularly the mutual dependencies between technologies usages and domain competencies calls for a differentiation of roles beyond the classical user designer dichotomy End user development EUD addresses these issues by offering lightweight use time support which allows users to configure adapt and evolve their software by themselves EUD is understood as a set of methods techniques and tools that allow users of software systems who are acting as non professional software developers to 1 create modify or extend a software artifact While programming activities by non professional actors are an essential focus EUD also investigates related activities such as collective understanding and sense making of use problems and solutions the interaction among end users with regard to the introduction and diffusion of new configurations or delegation patterns that may also partly involve professional designers   Tools and Techniques for Software Development in Large Organizations: Emerging Research and Opportunities Pendyala, Vishnu,2019-12-20 The development of software has expanded substantially in recent years As these technologies continue to advance well known organizations have begun implementing these programs into the ways they conduct business These large companies play a vital role in the economic environment so understanding the software that they utilize is pertinent in many aspects Researching and analyzing the tools that these corporations use will assist in the practice of software engineering and give other organizations an outline of how to successfully implement their own computational methods Tools and Techniques for Software Development in Large Organizations Emerging Research and Opportunities is an essential reference source that discusses advanced software methods that prominent companies have adopted to develop high quality products This book will examine the various devices that organizations such as Google Cisco and Facebook have implemented into their production and development processes Featuring research on topics such as database management quality assurance and machine learning this book is ideally designed for software engineers data scientists developers programmers professors researchers and students seeking coverage on the advancement of software devices in today s major corporations   *Coordinating User-Developer Efforts in Extreme Programming* Subodha Kumar,Anjana Susarla,Vijay Mookerjee,2011 Extreme programming XP calls for intense participation by users to ensure that systems are developed to meet current needs yet be flexible enough to adapt to future needs Beck 2000 In XP projects it is crucial for developers to align their efforts with those of the users that are allocated to the project so that the goals of the development activity from the perspective of the organization are achieved We consider an optimal control model of extreme programming where user and developer efforts the control variables are optimally chosen during the development period to maximize net system value system value minus user and developer effort Unlike most previous research our problem incorporates both demand side user value and supply side developer and user effort considerations in software development   *Sustainable Dual-Track Development* Todd Sedano,Paul Ralph,2025-09-19 Every decade or so the software development community reinvents itself to address the dominant problems of the day Agile methods reacted against slow bureaucratic
