However the burden of teaching problem solving strategies is left mostly to teachers and parents who are expected to develop their own curriculum and lesson plans for the complex topic of strategy and then teach it to students. This book presents different problem solving strategies that can easily be used by teachers and parents to teach the subject. The first three chapters present the concepts of number operations, the basic problem solving strategies and the unitary method. This is followed by many different problems that students will encounter in their careers. These include lessons that present problems on numbers, age, time and distance, money, work and time and mixtures. The focus of the book is to start with a problem statement, understand the problem and then solve it with a known mathematical procedure. Detailed examples are presented in each lesson to show the step by step strategy to solve different types of real life problems.
